**Remarkable Quest** Nicholas J. Besker,2002-04-30 A rescued Beerinsky shares the conclusion of his memoirs in a second volume It is the story of an intelligent sincere and noble man who began his self taught journey of life after 20 years of loveless living He learned the value of work thriftiness joy of love and laughter the pursuit of knowledge and the importance of being an honorable individual such things that are normally taught by parents and loved ones This is a exciting trip by a resilient orphaned Beerinsky who had to learn it on his own It is a joyful ride by a resourceful organized and energetic man named Nicholas Joseph Besker During his time in U S Navy Reserves he began to gain some self confidence and some time later realized the opportunity to become an individual person was his rescue from his feeling of worthlessness as taught by the orphanage foster home He is forever grateful to the U S Navy for this awakening and assistance in becoming his own man Because he lived in a rooming house near Marquette University in Milwaukee which catered to medical students he developed a keen interest and fascination with medicine The students encouraged him to study their books which he did with a voracious appetite This became a lifelong habit to study for pleasure The medical knowledge served him well when called to active duty Again the Navy allowed him to be a person follow a happy path by going to school to become a Navy Corpsman An eager student kept him busy learning and after serving successfully as a medic he was again called on for additional training this time to dental tech school Once that was in place he left San Diego to serve his country for three years in the South Pacific as the second member of a dental team assigned to care for Navy

Marine and Army personnel He was one of the lucky ones to return from those islands and recounts some of the humorous events of those military years Post war adjustments did produce some unexpected temporary unhappiness in his life His resiliency was such he was slowed down but not knocked down As was the case for quite a few returning military personnel he ran into a Dear John situation where his wife had found what she considered to be greener pastures and had chosen not to tell him while he was out of country Here again he is suddenly without family because of the divorce He did however retain custody of his son for which he was ill equipped Never experiencing a real functioning family unit caring for each other he did his parenting by instinct which he much later felt was probably not good enough He spent four years alone with his son as he used his laborious skills to provide for that son while he continued his pursuit of achievement and knowledge It was not a loving relationship because he did not yet know how to feel or show that kind of love The first time he thought he could afford to take a vacation he and Nickie went to Catalina Island The vacation ultimately netted them a wife mother and the opportunity to become a family Nicholas met Alice fell in love again and they were married She adopted Nickie and he now had someone to make it a home in a house he bought upon returning from war time service Alice was experienced in operating a rooming house so they bought a very large older home in Los Angeles and rented the home in Redondo Beach Alice ran the rooming house while Nicholas continued his wood working job at Hughes It was during this time through his boss at Hughes Nicholas became interested and hooked on rockhounding Such an artistic craft would someday provide much pleasure and some monetary benefits This good life lasted for a number of years as they worked towards building a nest egg and providing for their son Because work involved in operating a rooming house was never ending Alice grew weary of it and Nicholas was antsy for a new challenge Hi James Madison Elementary School ,1988 **A look at development** ,

Gorman,2016-08-01 Why do some parents refuse to vaccinate their children Why do some people keep guns at home despite scientific evidence of risk to their family members And why do people use antibiotics for illnesses they cannot possibly alleviate When it comes to health many people insist that science is wrong that the evidence is incomplete and that unidentified hazards lurk everywhere In *Denying to the Grave* Gorman and Gorman a father daughter team explore the psychology of health science denial Using several examples of such denial as test cases they propose six key principles that may lead individuals to reject accepted health related wisdom the charismatic leader fear of complexity confirmation bias and the internet fear of corporate and government conspiracies causality and filling the ignorance gap and the nature of risk prediction The authors argue that the health sciences are especially vulnerable to our innate resistance to integrate new concepts with pre existing beliefs This psychological difficulty of incorporating new information is on the cutting edge of neuroscience research as scientists continue to identify brain responses to new information that reveal deep seated innate discomfort with changing our minds *Denying to the Grave* explores risk theory and how people make decisions about what is best for them and their loved ones in an effort to better understand how people think when faced with significant health decisions This book points the way to a new and important understanding of how science should be conveyed to the public in order to save lives with existing knowledge and technology      *What Girls Say About Their Science Education Experiences* Michael Papadimitriou,2004-07-13 *What Girls Say About Their Science Education Experiences* describes the science education experiences of 12 young ladies enrolled in advanced science courses in a Southeast Texas High School *What Girls Say* includes profiles of each girl and topical chapters dealing with generalizations about the key elements of experience that the girls illuminated Also a detailed review of the current literature related to girls and science is provided The strength of the text lies in the use of the participants words to describe their own experiences Unfortunately despite over 30 years of research related to gender and science education females still are underrepresented in some upper level high school science courses particular college science curricula and majors and many scientific careers While boys and girls enter school with equal ability girls are marginalized in science and math to the point that they trail males in science interest and participation by graduation time However such differences have decreased While attitudes achievement levels and the other components of the science education experience have been quantitatively examined very little qualitative analysis exists to describe the educational experience of females in American high school classrooms from the perspective of the student A description of this phenomenon as constructed through the experiences of female students represents a worthy pursuit This book represents an attempt to describe this phenomenon as constructed through the experiences of female students Very simply the purpose of this book was to describe the essential elements of the current science education experience as constructed by female physics and advanced chemistry students The construct of science education experience for females included perceived a
