

PHD PERSONAL STATEMENT SAMPLE

With the rapid pace that technology is expanding and improving, it is an exciting and innovative tool with which to push the boundaries of research. Especially in the field of medicine, the introduction of methods to process large amounts of personalized data have allowed for new breakthroughs in everything from pediatric care to oncologic malignancies. Since I have been working in the field of research, I have been acutely aware of the role that big data plays in driving new diagnostics and therapeutics. I believe that this PhD program in Bioinformatics will allow me to enhance my research skills through integrating my passion for applying the latest in computing with the medical field.

During my undergraduate and post-baccalaureate program, I worked with patient samples to improve personalized treatments currently available for cancer. During my research, I was able to work directly with physicians to obtain patient biopsy samples, isolating tumor cells and immune cells in order to perform downstream sequencing. I learned many methods of analyzing the resulting dataset, performing a variety of statistical tests to see what genes were differentially expressed between various groups. I hope to further explore this type of biological data analysis in the future, utilizing the results of large sets of real patient data to drive novel research conclusions.

During the course of my PhD, I hope to be able to hone not only my technical skills, but also my ability to formulate scientific questions and design experiments to test hypotheses. Through collaborative research opportunities, I will be able to take on new projects that will challenge me and help me grow as an individual. I believe that the opportunities afforded to me during this Bioinformatics PhD program will equip me with the relevant skills and mindset to take on more challenging projects in the future as a medical research scientist.
