History of Computing: Learning from the Past Arthur Tatnall, 2010-08-13 History of Computing Learning from the Past Why is the

history of computing important Given that the computer as we now know it came into existence less than 70 years ago it might seem a little odd to some people that we are concerned with its history Isn't history about old things Computing of course goes back much further than 70 years with many earlier vices rightly being known as computers and their history is of course important It is only the history of electronic digital computers that is relatively recent History is often justified by use of a quote from George Santayana who famously said that Those who cannot remember the past are condemned to repeat it It is arguable whether there are particular mistakes in the history of computing that we should avoid in the future but there is some circularity in this question as the only way we will know the answer to this is to study our history This book contains papers on a wide range of topics relating to the history of computing written both by historians and also by those who were involved in creating this history The papers are the result of an international conference on the History of Computing that was held as a part of the IFIP World Computer Congress in Brisbane in September 2010 *Stop High-stakes Testing* Dale D.

Aptitude, Learning and Instruction Richard E. Snow,Pat-Anthony Federico,William E. Montague,Marshall J. is the latest in more than two decades of federal efforts to raise educational standards and an even longer stream of initiatives to improve education for poor children What lessons can we draw from these earlier efforts to help NCLB achieve its goals In Standards Based Reform and the Poverty Gap leading scholars in sociology economics psychology and education policy take on this critical question Armed with the latest data and up to date research syntheses the authors show that standards based reform has had some positive effects particularly in the area of teacher quality Moreover some of the critics greatest fears have not been realized for example retention rates have not shot upward Yet the overall pace of improvement has been slow owing in part to poor implementation Based on these findings the contributors offer recommendations for the implementation and impending reauthorization of NCLB These proposals such as national testing and a rethinking of achievement targets are sure to be at the center of the upcoming debate Contributors include Thomas Dee Laura Desimone George Farkas Barbara Foorman Brian Jacob Robert M Hauser Paul Hill Tom Loveless Meredith Phillips Andrew C Porter and Thomas Smith
