2023 Asia-Pacific International Symposium on Aerospace Technology (APISAT 2023) Proceedings Song Fu, 2024-07-04

This book is a compilation of peer reviewed papers from the 2023 Asia Pacific International Symposium on Aerospace Technology APISAT2023. The symposium is a common endeavour among the four national aerospace societies in China, Australia, Korea and Japan, namely Chinese Society of Aeronautics and Astronautics (CSAA), Royal Aeronautical Society Australian Division (RAeS), Australian Division, Japan Society for Aeronautical and Space Sciences (JSASS) and Korean Society for Aeronautical and Space Sciences (KSAS). APISAT is an annual event initiated in 2009. It aims to provide the opportunity to Asia Pacific nations for the researchers of universities and academic institutes and for the industry engineers to discuss the current and future advanced topics in aeronautical and space engineering. This is the volume II of the proceedings.

**Aircraft Take-off Performance and Risks for Wet and Contaminated Runways in Canada** David C.

Biggs, Transportation Development Centre (Canada), 1991. This report documents the results of a study into the risks associated with degraded performance during rejected and continued take off from wet and contaminated runways. A comprehensive review of world wide accident and incident data was undertaken to identify the severity of the problem and the factors involved. Runway condition characteristics, the correlation of runway friction test devices with the friction experienced by aeroplanes and take off performance estimation on wet and contaminated runways were reviewed. Performance estimates were examined on the basis of the ratio of contaminated vs dry friction. A method is outlined for classifying runway conditions based upon ICAO SARPS, FAA, NASA trials and the practices of leading countries and airlines. The frequency of wet and contaminated runways in Canada, the likelihood of critical events on the take off run and the take off weight distribution were determined. These frequency and probability distributions and runway weather and aircraft performance data were used in a probabilistic analysis of the risk of take off accidents. A number of counter measures were

examined including the JAR acceptable means of compliance for wet and contaminated runways      *Introduction to Flight Testing* James W. Airbus A320 Limitations and Performance Facundo Conforti, 2022-03-08 The limitations of an aircraft restrict its operation in order to ensure the safety of each of them While commercial aircraft have limitations that are difficult to overcome in normal operation it is important that the pilot knows each of them and respects its maximum values on each flight In this information manual all the operational limitations of an AIRBUS A320 standard model are detailed The maximum takeoff and landing weight the maximum crosswind component maximum speeds and a number of limitations that the aircraft must not exceed at any time during the flight The pilot in command will be responsible for complying with this

condition of safe flight respecting the maximum values for each case Knowing the limitations of the aircraft will help the pilot to understand the operation of his aircraft and operate it within the safe and effective parameters of flight

*Human Performance on the Flight Deck* Don Harris, 2016-12-05 Taking an integrated systems approach to dealing exclusively with the human performance issues encountered on the flight deck of the modern airliner this book describes the inter relationships between the various application areas of human factors recognising that the human contribution to the operation of an airliner does not fall into neat pigeonholes The relationship between areas such as pilot selection training flight deck design and safety management is continually emphasised within the book It also affirms the upside of human factors in aviation the positive contribution that it can make to the industry and avoids placing undue emphasis on when the human component fails The book is divided into four main parts Part one describes the underpinning science base with chapters on human information processing workload situation awareness decision making error and individual differences Part two of the book looks at the human in the system containing chapters on pilot selection simulation and training stress fatigue and alcohol and environmental stressors Part three takes a closer look at the machine the aircraft beginning with an examination of flight deck display design followed by chapters on aircraft control flight deck automation and HCI on the flight deck Part four completes the volume with a consideration of safety management issues both on the flight deck and across the airline the final chapter in this section looks at human factors for incident and accident investigation The book is written for professionals within the aviation industry both on the flight deck and elsewhere for post graduate students and for researchers working in the area
