Plant Breeding Mendelian To Molecular Approaches:

Plant Breeding H.K. Jain, M.C. Kharkwal, 2012-12-06 The Indian Society of Genetics and Plant Breeding was established in 1941 in recognition of the growing contribution of improved crop varieties to the country's agriculture. Scientific plant breeding had started in India soon after the rediscovery of Mendel's laws of heredity. The Indian Agricultural Research Institute set up in 1905 and a number of Agricultural Colleges in different parts of the country carried out some of the earliest work mostly in the form of pure line selections. In subsequent years hybridization programmes in crops like wheat, rice, oilseeds, grain legumes, sugarcane and cotton yielded a large number of improved cultivars with significantly higher yields. A turning point came in the 1960s with the development of hybrids in several crops including inter-specific hybrids in cotton. And when new germplasm with dwarfing genes became available in wheat and rice from CIMMYT and IRRI respectively, Indian plant breeders quickly incorporated these genes into the genetic background of the country's widely grown varieties with excellent grain quality and other desirable traits. This was to mark the beginning of modern agriculture in India as more and more varieties were developed characterized by a high harvest index and response to modern farm inputs like the inorganic fertilizers. India's green revolution which has led to major surpluses of food grains and other commodities like sugar and cotton has been made possible by the work of one of the largest groups of plant breeders working in a coordinated network.

Plant Breeding Mendelian to Molecular Approaches Jani H K., Kharlail M C., 2004 *Advances in Plant Breeding Strategies: Breeding, Biotechnology and Molecular Tools* Jameel M. Al-Khayri, Shri Mohan Jain, Dennis V. In modern days, crop improvement is a multidisciplinary division of agriculture. In this book, entitled *Breeding, Biotechnology and Seed Production of Field Crops*, emphasis has been given on principles, methods, and practices in plant breeding, biotechnology in crop improvement, and seed production of field crops. The book has been written for all sections of learners, educators, and staff members of seed industries. Particular importance has been underlined for postgraduate students who specialize in plant breeding and seed science. Each chapter of the book has been designed as per the recommended syllabus of Indian Council of Agricultural Research for the postgraduate students of various Agricultural Universities in our country. This book has been divided into two major parts: i) Principles of crop breeding and ii) Methods and practices of crop improvement and seed production of individual field crop. The book contains a total of 18 chapters. First three chapters are related to shed light on the basic principles, and remaining chapters deal with methods and practices of individual crop for improvement and seed production. We hope that the book will be ready to lend a hand to the advanced undergraduate students doing plant breeding, in elective postgraduate students who opted plant breeding, teachers, researchers, and staff members of private seed companies of this field of specialization.

Plant Mutagenesis Nitish Kumar, 2024-04-22

This book emphasizes recent developments in the use of mutation technologies for crop plant improvement and ultimately sustainable development. Plant breeders use genetic variation which is created by plant-induced mutation to create new and improved cultivars. The development of improved cultivars is a productive and optimistic agricultural strategy for economic and environmental sustainability since it ensures high yield, stability, enhances soil health, and poses no environmental risks. Understanding mutation induction and exploring its uses have paved the road for improving genetic diversity for different plants and agronomic features and advanced gene discovery for diverse qualities that aid in sustainable development. Plant mutation breeding imitates spontaneous mutation, the primary force driving evolution, by using a plant's own genetic resources instead of genetic transformation. In order to develop beneficial agricultural features, this strategy focuses on the application of various chemical and physical mutagens in conjunction with biotechnologies. In order to survive in challenging environments, increase nutritional value, fight diseases, and pests grow in

salty soils and utilize water and nutrients more effectively new varieties of plants are developed This approach has significantly boosted the economies of nations like China India Japan Pakistan and the USA As of right now the strategy has produced and disseminated more than 3600 mutant types in the majority of crop plants having a significant economic impact This book discusses several mutation induction techniques mutant screening genome editing the haploid breeding system for mutations as well as genomic developments and mutant gene identification Plant breeders researchers and students in the fields of plant sciences agriculture and food science will find this instructive book to be of great help *Industrial Crop Plants* Nitish Kumar,2024-04-22 Industrial crops offer farmers new market opportunities to increase their revenue by producing high value products focusing on fiber forest and energy crops industrial oilseeds rubber and resins pharmaceuticals and more Technological innovations in agriculture have facilitated higher yields but conserving crop genetic resources and diversity remains crucial for sustainable agricultural production This poses a challenge that can be addressed through modern tools of biotechnology and genomics utilizing the wealth of sequenced plant genomes This book addresses the need for knowledge in managing the risks and conservation of genetic diversity associated with advanced technology It provides comprehensive coverage of plant genomics and biotechnology catering to post graduate students researchers employees of seed and biotechnology companies as well as instructors in plant genetics breeding and biotechnology fields
