Martin, Charlotte Hess, 1989 Handbook on the Business of Sustainability Gerard George, Martine R. Haas, Havovi Joshi, Anita M. McGahan, Paul Tracey, 2022-02-11 This ground breaking Handbook uniquely focuses on the business of sustainability offering a fresh insight and practical solutions to the challenges that businesses face in making human activity sustainable It is organized into four distinctive themes that cut across levels of analysis and illustrate a rich set of solution contexts that will guide future research *Synthetic Worlds* Edward Castronova, 2008-09-15 From EverQuest to World of Warcraft online games have evolved from the exclusive domain of computer geeks into an extraordinarily lucrative staple of the entertainment industry People of all ages and from all walks of life now spend thousands of hours and dollars partaking in this popular new brand of escapism But the line between fantasy and reality is starting to blur Players have created virtual societies with governments and economies of their own whose currencies now trade against the dollar on eBay at rates higher than the yen And the players who inhabit these synthetic worlds are starting to spend more time online than at their day jobs In *Synthetic Worlds* Edward Castronova offers the first comprehensive look at the online game industry exploring its implications for business and culture alike He starts with the players giving us a revealing look into the everyday lives of the gamers outlining what they do in their synthetic worlds and why He then describes the economies inside these worlds to show how they might dramatically affect real world financial systems from potential disruptions of markets to new business horizons Ultimately he explores the long term social consequences of online games If players can inhabit worlds that are more alluring and gratifying than reality then how can the real world ever compete Will a day ever come when we spend more time in these synthetic worlds than in our own Or even more startling will a day ever come when such questions no longer sound alarmist but instead seem obsolete With more than ten million active players worldwide and with Microsoft and Sony pouring hundreds of millions of dollars into video game development online games have become too big to ignore *Synthetic Worlds* spearheads our efforts to come to terms with this virtual reality and its concrete effects Illuminating Castronova's analysis of the economics of fun is intriguing Virtual world economies are designed to make the resulting game interesting and enjoyable for their inhabitants Many games follow a rags to riches storyline for example But how can all the players end up in the top 10% Simple the upwardly mobile human players need only be a subset of the world's population An underclass of computer controlled bot citizens meanwhile stays poor forever Mr Castronova explains all this with clarity wit and a merciful lack of academic jargon The Economist *Synthetic Worlds* is a surprisingly profound book about the social political and economic issues arising from the emergence of vast multiplayer games on the Internet What Castronova has realized is that these games where players contribute considerable labor in exchange for things they value are not merely like real economies they are real economies displaying inflation fraud

provides a critical selective review of concepts from game theory and their applications in public policy and further suggests some modifications for some of the models chiefly in cooperative game theory to improve their applicability to economics and public policy Saving Global Fisheries J. Samuel Barkin,Elizabeth R. DeSombre,2013 A proposal for a new global approach for fisheries focused on reducing fishing capacity and providing incentives for long term sustainability The Earth s oceans are overfished despite more than fifty years of cooperation among the world s fishing nations There are too many boats chasing too few fish In Saving Global Fisheries J Samuel Barkin and Elizabeth DeSombre analyze the problem of overfishing and offer a provocative proposal for a global regulatory and policy approach Existing patterns of international fisheries management try to limit the number of fish that can be caught while governments simultaneously subsidize increased fishing capacity focusing on fisheries as an industry to be developed rather than on fish as a resource to be conserved Regionally based international management means that protection in one area simply shifts fishing efforts to other species or regions Barkin and DeSombre argue that global rather than regional regulation is necessary for successful fisheries management and emphasize the need to reduce subsidies They propose an international system of individual transferable quotas that would give holders of permits an interest in the long term health of fish stocks and help create a sustainable level of fishing capacity globally *Globalization and the Politics of Resistance* B. Gills,2000-04-07 The paradox of globalization is that it both weakens and activates social forces of resistance This book establishes the centrality of the political in our understanding of globalization and explores the new strategies of resistance emerging on local national regional and global scales Its impressively wide ranging set of contributors engage in re thinking what practices now constitute viable political strategies in the world economy focusing on popular responses to neoliberal globalization and the rearticulation of society politics and the state
