

## SECTION 10 - ENGINE - CHAPTER 1

10. If **air conditioning** is fitted, withdraw the condenser (3) from the radiator (1). Carefully move both items away from the front of the tractor and secure to the side of the engine ensuring that they are not allowed to hang on their tubes.

11. Slide out the **oil cooler** (2) and **receiver drier** from the radiator and tie up out of the way, again ensuring that the cooler is not allowed to hang on its hoses.

12. Disconnect **electrical connection** to the steering angle sensor, if fitted, Figure 5.

13. Drain the **cooling system fluid** into a clean container and disconnect the radiator hoses. Disconnection of the radiator lower hose provides a suitable drain point. Place a large clean tray under the vehicle to capture the fluid for future use. Figure 2, (2)

14. Remove the **radiator fan shroud** hardware, leaving shroud in position. Figures 1, (2) and 2, (3).

15. Disconnect **air cleaner** inlet tube. Figure 2, (4).

16. Position **Splitting Tool, MS2700.C** with **engine supports, MS2700.C-8 or 297617 (front suspension)** in position. If splitting tool is not available use an overhead crane with suitable straps. Strap at the front and rear of the front support to maintain balance.

**NOTE:** It will be necessary to remove the engine hood.

Support the engine at the front of the transmission and position wedges between axle and support to prevent articulation. Remove hardware securing the engine to the front support and wheel the front axle and support away from the engine.
