Food Security in a Developing World Pardeep Singh,Bendangwapang Ao,Nabajyoti Deka,Chander Mohan,Chhetan Chhoidub,2024-05-31 The book tries to answer the most fundamental question of whether there is a link between abundant food supply and economic growth with respect to a higher degree of human development In order to have flourishing economic growth within a country the need for a food security system is a must The world as we know is faced with shortages of food supply which has been a major factor in the country s economic development The book is an attempt to understand the problems and current situation of food systems in the developing world It focuses on the pathways to understand the challenges that it faces and predict future scenarios The motive is to create academic literature to understand the basis of sustainable food security The social economic and political factors become the main theme of the book It focuses on the interdisciplinary nature of food security Many a time we only understand the idea of food security through the lens of scientific nature but in the meantime it forgets the other important factors that are governing the issue of food security The inclusion of the cases section in the book helps to outline the current scenarios of the developing world It helps to formulate a pathway or a way forward to understand the causes of food security Food has now become a political context in the international system The need for analyzing the political angle is necessary

The context of innovations and technological developments forms an important part of food security. The critique of existing policy systems across the developing world is a must need discussion as it is the policies that will make the food systems sustainable. Last but not least is to look at how the global food systems work and how far it has been able to fix the problems of food insecurity in the developing world. Overall the book is an excellent interdisciplinary food security literature.

Chromium in Plants and Environment Nitish Kumar, Clemens Walther, Dharmendra K. Gupta, 2023-12-20. This edited book brings together a diverse group of environmental science, sustainability and health researchers to address the challenges posed by global mass poisoning caused by chromium contamination of soil and plants. In recent years, contamination of the environment by chromium has become a major concern. Chromium is a non-degradable, harmful and toxic pollutant which negatively affects the environment. It is unique among the heavy metals found in industrial wastewater and sewage and sludge as it may exist as a trivalent cation and as an anion in the hexavalent state in the pH range of agricultural soils. It is used on a large scale in many different industries including metallurgy, electroplating, production of paints and pigments, tanning, wood preservation, chemical production and pulp and paper production. These industries are contributing larger amounts of chromium which can ultimately have significant adverse effects on biological and ecological activities of ecosystems. Chromium enters the food chain through consumption of plant material. A high concentration of chromium has been found to be harmful to vegetation. As the chromium concentration in plants increases, it adversely affects several biological parameters and eventually renders the soil barren. The book sheds light on this global environmental issue and proposes solutions to contamination through multi-disciplinary approaches and case studies from different parts of the world. This book is a valuable resource to students, academicians, researchers and environmental professionals who are doing field work on chromium contamination throughout the world.
