

Conceptual Forces Worksheet

Name: _____ **KEY** _____

Mod: _____

Date: _____

Directions: Answer the following problems below using complete sentences to earn full credit.

1. Compare and contrast contact vs. field forces. Give examples of each.

A field force and contact force both apply forces to objects. A contact force requires two objects to be in contact with one another to exist. A field force interacts with objects without contact through some force field. Examples of contact forces would be push and pull. Examples of field forces are gravity and electromagnetic.

2. How do we calculate the weight of an object?

$$w = mg$$
$$\text{weight (N)} = \text{Mass (kg)} \times \text{Acceleration Due to Gravity (9.8 } \frac{\text{m}}{\text{s}^2})$$

3. What is the weight of a 40kg object?

$$w = mg$$
$$w = (40 \text{ kg}) (9.8 \frac{\text{m}}{\text{s}^2})$$
$$w = 392 \text{ N}$$

4. What would be the mass of an object that weighted 200N?

$$w = mg$$
$$m = \frac{w}{g}$$
$$m = \frac{200 \text{ N}}{9.8 \frac{\text{m}}{\text{s}^2}} = 20.41 \text{ kg}$$

5. What changes depending on location in the universe, weight or mass? Explain...

Mass is the measure of matter in an object. Weight is the force of gravity pulling on an object. Mass stays constant regardless of location. Weight depends on the gravitational field produced by near by large masses.

6. State Newton's First Law of Motion.

Also known as the law of inertia. An object at rest remains at rest. An object in motion remains at a constant velocity, unless acted on by an unbalanced net force.

7. State Inertia.

The tendency for an object to resist change in motion. Directly proportional to mass.

8. Why is the normal force called a support force?

It is the force created by an object supporting another object.

Inside Teacher Education: Challenging Prior Views of Teaching and Learning S.M. Bullock, 2011-07-23 Learning to teach is complex Teacher candidates begin a preservice program with powerful tacit assumptions about how teachers teach based on lengthy apprenticeships of observation over many years as students Virtually all teacher education programs provide a mixture of coursework and classroom experience Much has been written about the theory into practice approach in teacher education an approach that assumes teacher candidates who have been provided with instructions about how to teach will be able to recall and apply them in a school setting In reality teacher candidates report considerable difficulty enacting theory in practice to the point that many question the value of coursework This book takes an in depth look at five future teachers in one teacher education program analyzing and interpreting how they and their teacher educators learn from experience during both coursework and practicum experiences Many assumptions about the complex challenges of teaching teachers are called into question Is the role of a teacher educator to synthesize research based best practices for candidates to take to their field placements Does the preservice practicum experience challenge or reinforce a lifetime of socialized experiences in schools Must methods courses always be seen by most teacher candidates as little more than sites for collecting resources Where and how do candidates construct professional knowledge of teaching The data illustrate clearly that methods courses can be sites for powerful learning that challenges tacit assumptions about how and why we teach

Science, 2009 The Knight's Move James Edwin Loder, W. Jim Neidhardt, 1992 The cultural fragmentation spawned by the destructive dualisms of our age has heightened the urgency of the search for common ground in theological and scientific inquiry In *The Knight's Move* theologian James E Loder at Princeton Seminary and physicist W Jim Neidhardt at the New Jersey Institute of Technology propose a unifying connection in a generic concept of spirit graphically represented by the strange loop relationality of the Mobius band This relational logic is disclosed in surprisingly analogous ways in the knight's move of discovery in both science and theology whether in the leap of insight or in the leap of faith At the irreducible core of the knight's move is the self involvement of the knower pointing to the proximate relationality of the human spirit to the contingent relationality of

physical reality and ultimately to the trinitarian relationality of God's Spirit. In the pivotal knight's moves of Niels Bohr's complementarity in the exploration of quantum physics and Søren Kierkegaard's qualitative dialectic in the exploration of human nature and the relational logic of the incarnation the authors establish a model of spirit that illuminates remarkable interdisciplinary convergences in human development. Piaget's scientific discovery, Einstein and theological knowledge (T. F. Torrance). This relational model also describes the fundamental pattern governing the transformational dynamics of human experience from the individual journey of intensification to the corporate life of communal interaction. The central insights of *The Knight's Move* are grounded in the relation of human spirit and Divine Spirit, a gracious personal interplay pictured in the unending paradoxical unity of the strange loop. This foundation for the self-relational nature of human knowing provides a fruitful way of conceptualizing common roots in theology and science as revealed in the astonishing developments of the twentieth century.

Research Based Undergraduate Science Teaching Dennis W. Sunal, Cynthia S. Sunal, Emmett L. Wright, Cheryl L. Mason, Dean Zollman, 2014-07-01. *Research in Science Education* RISE Volume 6. *Research Based Undergraduate Science Teaching* examines research theory and practice concerning issues of teaching science with undergraduates. This RISE volume addresses higher education faculty and all who teach entry level science. The focus is on helping undergraduates develop a basic science literacy leading to scientific expertise. RISE Volume 6 focuses on research based reforms leading to best practices in teaching undergraduates in science and engineering. The goal of this volume is to provide a research foundation for the professional development of faculty teaching undergraduate science. Such science instruction should have short and long-term impacts on student outcomes. The goal was carried out through a series of events over several years. The website at <http://nseus.org> documents materials from these events. The international call for manuscripts for this volume requested the inclusion of major priorities and critical research areas, methodological concerns, and results of implementation of faculty professional development programs and reform in teaching in undergraduate science classrooms. In developing research manuscripts to be reviewed for RISE Volume 6, researchers were asked to consider the status and effectiveness of current and experimental practices for reforming undergraduate science courses involving all undergraduates, including groups of students who are not always well represented in STEM education. To influence practice, it is important to understand how research-based practice is made and how it is implemented. The volume should be considered as a first step in thinking through what reform in undergraduate science teaching might look like and how we help faculty to implement such reform.
