## **Physics Memo Trial 2014:**

*The History of Physics in Cuba* Angelo Baracca, Jürgen Renn, Helge Wendt, 2014-04-22 This book brings together a broad spectrum of authors both from inside and from outside Cuba who describe the development of Cuba's scientific system from the colonial period to the present. It is a unique documentation of the self-organizing power of a local scientific community engaged in scientific research on an international level. The first part includes several contributions that reconstruct the different stages of the history of physics in Cuba from its beginnings in the late colonial era to the present. The second part comprises testimonies of Cuban physicists who offer lively insights from the perspective of the actors themselves. The third part presents a series of testimonies by foreign physicists, some of whom were directly involved in developing Cuban physics in particular in the development of teaching and research activities in the early years of the Escuela de Física. The fourth part of the volume deals with some of the issues surrounding the publishing of scientific research in Cuba. Cuba's recent history and current situation are very controversial issues. Little is known about the development and status of higher education and scientific research on the island. However, Cuba has one of the highest proportions in the world of people with a university degree or doctorate and is known for its highly developed medical system. This book focuses on a comprehensive overview of the history of the development of one specific scientific discipline, physics, in Cuba. It traces the evolution of an advanced research system in a developing country and shows a striking capacity to link the development of modern research with the concrete needs of the country and its population. A little-known aspect is the active participation of several western physicists and technicians during the 1960s, the role of summer schools organized by French, Italian, and other western physicists, as well as the active collaboration with European universities.

*The Psychology and Sociology of Wrongful Convictions* Wendy J. Koen, C. Michael Bowers, 2018-06-26 Wrongful convictions are the result of faulty or false scientific evidence in 50% of the cases. Defense counsel is often at a great disadvantage in defending against evidence based on science. Illusory Evidence: The Psychology and Sociology of Wrongful Convictions is written for the non-scientist to make complicated scientific information clear and concise enough for attorneys and judges to master. This is obtained by providing case studies to simplify issues in forensic psychology for the legal professional. Increases the courts' knowledge about areas of psychology that have been debunked, have advanced, or have been refined by the scientific community. Covers issues in psychological forensics, namely: Profiling, Psychological Defenses, Mitigation, Eyewitness Testimony, Identification, Child Testimony, Repressed Memories, False Confessions, and Moral Panic. Trains prosecuting attorneys about the present state of the forensic psychology to avoid relying only on legal precedent and will not present flawed science to the court. Provides defense attorneys the knowledge necessary to competently defend where forensic psychology plays a part in a prosecution. Arms innocence projects and appellate attorneys with the latest information to challenge convictions. Uses case studies to simplify issues in forensic psychology for the legal professional.

*Lung Cancer Screening* Gregory C. Kane, Julie A. Barta, Ronald E. Myers, Nathaniel R. Evans

III,2023-08-24 This book is a comprehensive guide to lung cancer screening for clinicians healthcare systems community leaders and public health officials with the hope of creating a more equitable landscape in both lung cancer screening and lung cancer related outcomes at local state and national levels Authors take a new approach to primary and secondary lung cancer prevention that is in the early stages of adoption in the United States The last decade ushered in recognition of screening as an effective intervention but unfortunately despite the wide acceptance of the importance of this new screening modality nationally not more than 5% of eligible subjects have undergone screening to date in the United States although in some states uptake has reached as high as 16% As is common with any new preventive cancer screening racial and socioeconomic disparities emerge in utilization stage at diagnosis and mortality Over time these disparities decline but consequential differences endure Therefore it is critical to establish equitable screening practices The true measure of the effectiveness of any lung cancer screening program needs to be viewed through the lens of its impact on populations including those most affected by the morbidity and mortality of smoking related illness and lung cancer As such this book emphasizes a number of important public health topics including community outreach to vulnerable populations social justice issues addressing stigma and fatalism in the general community and the use of geocoding to assess a program s impact at a population level This book weaves traditional topics related to lung cancer screening such as promoting initial and repeat screening interpreting Lung RADs and managing the follow up of findings into the population perspective in order to present a unified comprehensive approach to the subject Further it serves as a guide that health systems health care professionals community leaders and other stakeholders can use to achieve the promise of lung cancer screening Nuclear Science Abstracts ,1973 *Trial by Fire* Charles E.
