

P. Sci. Waves **Key**

Put all answers on a separate sheet of notebook paper.

1. Mechanical waves need a medium through which to transport energy.
2. The particles in a surface water wave move in a circle (back-&-forth / up & down).
3. Waves in which the particles of medium move at right angles to the direction of the wave are transverse waves.
4. The wavelength of a wave is measured from the crest of one wave to the crest of the next.
5. If the wavelength of a given wave decreases, you know that its frequency will increase.
6. Two waves have the same frequency and wavelength, but the first wave has a greater amplitude. The energy of the first wave greater than that of the second.
7. Wave A has a greater frequency than wave B, but the amplitude of the two waves is the same. The energy of wave A is equal to that of wave B.
8. The unit for frequency is the hertz.
9. A wave will travel only as long as it has energy to carry.
10. When you squeeze together the coils of a spring and then release them, you are creating a compressional wave.
11. Waves in which the particles of the medium move only in the same direction as the motion of the wave are compressional waves.
12. You are creating a wave on a spring. If you start shaking the spring more slowly, the wavelength of the resulting wave will increase.
13. If you are lying on a raft, and you notice that the number of waves that go past the raft increases, you also find that the distance between each crest decreases.
14. Wave A carries more energy than wave B. Wave B has a smaller amplitude than wave A.
15. The energy a wave carries is measured by its amplitude.
16. For a given wave, if the frequency doubles, the wavelength is halved.
17. When a wave passes from a less dense medium to a more dense medium, the speed may change.
18. Repeating disturbances that transfer energy through matter or space are waves.

19. The two types of mechanical waves are transverse and compressional (longitudinal).
20. If the frequency of a water wave changes, its wavelength must also change.
21. The symbol λ (lambda) stands for the wavelength.

Figure 11-1

22. In Figure 11-1, identify the following structures:
B wavelength, A crest, C amplitude
23. Speed can be determined by dividing the distance traveled by the time. The water waves in a lake travel 4.4 m in 2.0 s. What is the speed of the waves? $y = d/t$ $y = 4.4\text{m} / 2.0\text{s}$ $y = 2.2\text{m/s}$
24. An ocean wave has a frequency of 2.0 Hz with a wavelength of 10 m. What is the velocity of the wave? $y = f \times \lambda$ $y = 2.0\text{ Hz} \times 10\text{m}$
 $y = 20\text{m/s}$

25. The wavelength of the wave in the diagram is 1.5 m.
26. The amplitude of the above wave is 0.5 m.
27. A man is standing on the shore of a beach, up to his knees in water. Every 5 seconds a wave breaks on him. What is the period of the wave? 5 seconds

Physics Study Guide Answers Sound Leon Leon:

The Physics of Music and Color Leon Gunther, 2019-10-14 This undergraduate textbook aids readers in studying music and color which involve nearly the entire gamut of the fundamental laws of classical as well as atomic physics The objective bases for these two subjects are respectively sound and light Their corresponding underlying physical principles overlap greatly Both music and color are manifestations of wave phenomena As a result commonalities exist as to the production transmission and detection of sound and light Whereas traditional introductory physics textbooks are styled so that the basic principles are introduced first and are then applied this book is based on a motivational approach It introduces a subject with a set of related phenomena challenging readers by calling for a physical basis for what is observed A novel topic in the first edition and this second edition is a non mathematical study of electric and magnetic fields and how they provide the basis for the propagation of electromagnetic waves of light in particular The book provides details for the calculation of color coordinates and luminosity from the spectral intensity of a beam of light as well as the relationship between these coordinates and the color coordinates of a color monitor The second edition contains corrections to the first edition the addition of more than ten new topics new color figures as well as more than forty new sample problems and end of chapter problems The most notable additional topics are the identification of two distinct spectral intensities and how they are related beats in the sound from a Tibetan bell AM and FM radio the spectrogram the short time Fourier transform and its relation to the perception of a changing pitch a detailed analysis of the transmittance of polarized light by a Polaroid sheet brightness and luminosity and the mysterious behavior of the photon The Physics of Music and Color is written at a level suitable for college students without any scientific background requiring only simple algebra and a passing familiarity with trigonometry The numerous problems at the end of each chapter help the reader to fully grasp the subject [Catalog of Copyright Entries.
