

Progressive waves

 → Longitudinal - particles oscillate in the same direction of energy transfer
 - e.g. sound waves

 → Transverse - particles oscillate perpendicular to the direction of energy transfer
 - e.g. the EM spectrum
 - separate waves on the spectrum

 λ wave amplitude
 λ is the wavelength
 T is the time period
 $f = 1/T$

 A physical object only existing in the region. This causes wave front change a diffraction occurs light spreading in certain direction to fill in gaps. The light diffracts into gaps and light

Phase refers to the part of the cycle the wave is in - one full cycle is 360° or 2π rad.

- wave phase is in phase
- wave phase is 180° out of phase (Troughs)

wave speed - $c = f\lambda$
 $\frac{m}{s} = \frac{1}{s} \times m$

waves

Progressive waves

All you need a progressive wave that travels in the direction and source back in an opposite direction original part. This is called a standing wave.

 Nodes is a position that part is at displacement. It's antinodes for maximum displacement (sometimes in phase)

 2nd harmonic
 $f = \frac{1}{2L} \sqrt{\frac{T}{\mu}}$ is frequency of the 2nd harmonic
 $f = \frac{1}{2L} \sqrt{\frac{T}{\mu}}$

The first part is a standing wave that in the same direction, antinodes, nodes, and frequency - the wave they are different.

Phase alignment is alignment to phase alignment. Alignment is in phase or out of phase.

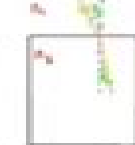

Constructive interference is when the phase alignment is in phase.

Destructive interference is when the phase alignment is out of phase.

$\rightarrow \left(\frac{1}{2} + \frac{1}{2}\right)\lambda$

Refraction

Refraction is caused by a wave slowing down or speeding up - it changes direction when it passes from one medium to another.

 normal - 90° in the plane
 1 = angle of incidence
 2 = angle of refraction
 Snell's law - $n_1 \sin \theta_1 = n_2 \sin \theta_2$
 $n_1 \sin \theta_1 = n_2 \sin \theta_2$
 $n_1 \sin \theta_1 = n_2 \sin \theta_2$

(in a vacuum, $n=1$)
 n is the refractive index - the bigger the number, the slower the speed of light in the material.

If the angle of incidence is perpendicular to the plane where the angle of refraction is 90° , it is totally internally reflected, but happens when the angle of incidence is not the critical angle. The material is not more optically dense than the material outside.

$\rightarrow n_1 \sin \theta_1 = n_2 \sin \theta_2$
 $n_1 \sin \theta_1 = n_2 \sin \theta_2$
 $\sin \theta_c = \frac{n_2}{n_1}$

This is helped in making optical fibres on all the devices light around on fibre is using a signal.

Light waves on the edge of an object pass over the surface and into the air. This is called diffraction. Light waves on the edge of an object pass over the surface and into the air. This is called diffraction.

When a signal is sent down an optical fibre, it is sent down the fibre. The signal is sent down the fibre. The signal is sent down the fibre.

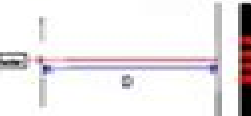

Phase alignment is when the wave phase is in phase or out of phase.

 This is helped in making optical fibres on all the devices light around on fibre is using a signal.

Interference

 Two coherent sound sources
 • in phase - constructive interference
 • out of phase - destructive interference

Laser light is monochromatic - light is only one wavelength - looks like a single colour.

 • distance between each fringe
 • distance from the slit to the screen
 • slit spacing
 $\lambda = \frac{\lambda D}{S}$

Light waves have a wavelength similar to the size of the gap light goes through. Light waves are formed at constructive interference - we see light. Light waves are formed at destructive interference - light cancels out so it goes dark.

 • This is the diffraction pattern of white light
 • Bright and dark fringes
 • Central maximum

1st diffraction grating that uses a slit

 1st order - $\lambda \sin \theta$
 2nd order - $2\lambda \sin \theta$
 3rd order - $3\lambda \sin \theta$
 4th order - $4\lambda \sin \theta$
 5th order - $5\lambda \sin \theta$

$d \sin \theta = n\lambda$

Roger Pryor, 2011 Multiphysics Modeling Using COMSOL rapidly introduces the senior level undergraduate graduate or professional scientist or engineer to the art and science of computerized modeling for physical systems and devices It offers a step by step modeling methodology through examples that are linked to the Fundamental Laws of Physics through a First Principles Analysis approach The text explores a breadth of multiphysics models in coordinate systems that range from 1D to 3D and introduces the readers to the numerical analysis modeling techniques employed in the COMSOL Multiphysics software After readers have built and run the examples they will have a much firmer understanding of the concepts skills and benefits acquired from the use of computerized modeling techniques to solve their current technological problems and to explore new areas of application for their particular technological areas of interest Summary of International Energy Research and Development Activities Smithsonian Science Information Exchange, 1974
