CONSERVATION OF MOMENTUM

Law of Conservation of Momentum

- When a scenario involves multiple objects we can consider them as a system.
- If there is no external force acting on the system we call it an isolated system.
- The law of conservation of momentum: the total momentum within an isolated system is conserved (it's constant over time) regardless of the internal interactions between the objects in the system. The momentum of each object is not conserved, only the total momentum of the system.
- This does not mean that the total momentum within a system is zero (although it can be), it means the change in momentum is zero between two times.
- If there is a net external force on the system, the system is not isolated and an impulse is exerted on the objects in the system, changing the total momentum.

Variables	SI Unit
p	momentum $\frac{\text{kg} \cdot \text{m}}{\text{s}}$
m	mass kg
v	velocity $\frac{\text{m}}{\text{s}}$
J	impulse $\frac{\text{kg} \cdot \text{m}}{\text{s}}$
F	force N
t	time s

Law of conservation of momentum (universe and isolated system)

$\Delta p_{\text{total}} = 0 \rightarrow p_{\text{total}} = p_{\text{total}}$

$\Delta p_{x \text{ total}} = 0 \rightarrow p_{x \text{ total}} = p_{x \text{ total}}$

$\Delta p_{y \text{ total}} = 0 \rightarrow p_{y \text{ total}} = p_{y \text{ total}}$

Isolated system: there is no net external force action on the system
