CHAPTER ONE LINEAR MOTION

Introduction:

Study of motion is divided into two:

1. Kinematics
2. Dynamics

In kinematics forces causing motion are disregarded while dynamics deals with motion of objects and the forces causing them.

A. Displacement

Distance covered by a body in a specified direction is called displacement. It is denoted by letter 's' and has both magnitude and direction. Distance is the movement from one point to another. The SI unit for displacement is the metre (m).

B. Speed

This is the distance covered per unit time.

Speed = distance covered/ time taken. (Distance is a scalar quantity since it has magnitude only. The SI unit for speed is metres per second (m/s or ms⁻¹).

Average speed = total distance covered/total time taken

Other units for speed used are km/h.

(Examples)

1. A body covers a distance of 20m in 4 seconds, it rests for 10 seconds and finally covers a distance of 50m in 10 seconds. Calculate the average speed.

Solution

Total distance covered = 20 + 50 = 70m

Total time taken = 4 + 10 + 10 = 24 seconds

Therefore average speed = 70/24 = 2.9m/s

2. Calculate the distance in metres covered by a body moving with a uniform speed of 100 km/h in 20 seconds.

Solution

Distance covered = speed × time

$$= 100 \times \frac{20}{3600} \text{ (convert km/h to m/s)}$$

$$= 50 \times 20$$

$$= 1000 \text{ m}$$

3. Calculate the time in seconds taken a body moving with a uniform speed of 100 km/h to cover a distance of 2.000 km?

Solution

Speed: 100 km/h = $100 \times \frac{1000}{3600} \text{ m/s} = 27.78 \text{ m/s}$

Time = distance/speed

$$2000 \div 27.78 \text{ m/s}$$

$$= 72.000 \text{ seconds.}$$

III. Velocity

This is the change of displacement per unit time. It is a vector quantity.

Velocity = change in displacement/total time taken

The SI unit for velocity is m/s

Resources in Education ,2001-04 Physics for the Inquiring Mind Eric M. Rogers,2011-04-17 In our scientific age an understanding of physics is part of a liberal education Lawyers bankers governors business heads administrators all wise educated people need a lasting understanding of physics so that they can enjoy those contacts with science and scientists that are part of our civilization both materially and intellectually They need knowledge and understanding instead of the feelings all too common that physics is dark and mysterious and that physicists are a strange people with incomprehensible interests Such a sense of understanding science and scientists can be gained neither from sermons on the beauty of science nor from the rigorous courses that colleges have offered for generations when the headache clears away it leaves little but a confused sense of mystery Nor is the need met by survey courses that offer a smorgashbord of tidbit they give science a bad name as a compendium of information or formulas The non scientist needs a course of study that enables him to learn real science and make its own with delight For lasting benefits the intelligent non scientist needs a course of study that enables him to learn genuine science carefully and then encourages him to think about it and use it He needs a carefully selected framework of topics not so many that learning becomes superficial and hurried not so few that he misses the connected nature of scientific work and thinking He must see how scientific knowledge is built up by building some scientific knowledge of his own by reading and discussing and if possible by doing experiments himself He must think his own way through some scientific arguments He must form his own opinion with guidance concerning the parts played by experiment and theory and he must be shown how to develop a taste for good theory He must see several varieties of scientific method at work And above all he must think about science for himself and enjoy that These are the things that this book encourages readers to gain by their own study and thinking *Physics for the Inquiring Mind* is a book for the inquiring mind of students in college and for other readers who want to grow in scientific wisdom who want to know what physics really is *The School Librarian* ,1966 **The New Zealand University Calendar** University of New Zealand,1920 *Science for All Americans* F. James Rutherford,Andrew Ahlgren,1991-02-14 In order to compete in the modern world any society today must rank education in science mathematics and technology as one of its highest priorities It s a sad but true fact however that most Americans are not scientifically literate International studies of educational performance reveal that U S students consistently rank near the bottom in science and mathematics The latest study of the National Assessment of Educational Progress has found that despite some small gains recently the average performance of seventeen year olds in 1986 remained substantially lower than it had been in 1969 As the world approaches the twenty first century American schools when it comes to the advancement of scientific knowledge seem to be stuck in the Victorian age In *Science for All Americans* F James Rutherford and Andrew Ahlgren brilliantly tackle this devastating problem Based on Project 2061 a scientific literacy initiative sponsored by the American Association for the Advancement of Science this wide ranging important volume

explores what constitutes scientific literacy in a modern society the knowledge skills and attitudes all students should acquire from their total school experience from kindergarten through high school and what steps this country must take to begin reforming its system of education in science mathematics and technology Science for All Americans describes the scientifically literate person as one who knows that science mathematics and technology are interdependent enterprises with strengths and limitations who understands key concepts and principles of science who recognizes both the diversity and unity of the natural world and who uses scientific knowledge and scientific ways of thinking for personal and social purposes Its recommendations for educational reform downplay traditional subject categories and instead highlight the connections between them It also emphasizes ideas and thinking skills over the memorization of specialized vocabulary For instance basic scientific literacy means knowing that the chief function of living cells is assembling protein molecules according to the instructions coded in DNA molecules but does not mean necessarily knowing the terms ribosome or deoxyribonucleic acid Science mathematics and technology will be at the center of the radical changes in the nature of human existence that will occur during the next life span therefore preparing today s children for tomorrow s world must entail a solid education in these areas Science for All Americans will help pave the way for the necessary reforms in America s schools *Current Index to Journals in Education* ,2002 *Research Paper - Weather Bureau* United States.
