Question 02

(a) Two students, A and B, use a metal ruler to measure the length of a glass slide. Student A repeats the measurement three times while student B only takes a single measurement.

- (i) If the smallest division on the ruler is 1 mm, explain how students A and B will each obtain an error estimate for their results. [3]

The uncertainty in an instrument is given by the smallest division:

Student A

Taking three readings takes care of random errors, a mean length can be calculated and the error in the average value is given by half of the difference between the largest and smallest value. i.e. $\Delta l = (l_{\max} - l_{\min}) / 2$ ✓✓

Student B

The error is given by half the minimum division/graduation of the instrument ✓

- (ii) Discuss a potential source of a systematic error in these measurements, should the experiment be performed on a hot day (room temperature $\sim 39^\circ\text{C}$). [2]

On a hot day, the metal ruler will expand (i.e. increase in length) and possibly distorted as well. Thus, the measured lengths will be shorter because of thermal expansion effects. ✓✓

(b) A metal cube has mass of 250 ± 1 g and length of 23.5 ± 0.2 mm, calculate the density in kg.m^{-3} and its associated relative error. [6]

Tunnel Visions Michael Riordan, Lilian Hoddeson, Arienne W. Kolb, 2015-11-20 A detailed and engaging account of the development of the superconducting supercollider one of the largest scientific undertakings in the United States Journal of American History Starting in the 1950s US physicists dominated the search for elementary particles aided by the association of this research with national security they held this position for decades In an effort to maintain their hegemony and track down the elusive Higgs boson they convinced President Reagan and Congress to support construction of the multibillion dollar Superconducting Super Collider project in Texas the largest basic science project ever attempted But after the Cold War ended and the estimated SSC cost surpassed ten billion dollars Congress terminated the project in October 1993 Drawing on extensive archival research contemporaneous press accounts and over one hundred interviews with scientists engineers government officials and others involved Tunnel Visions tells the riveting story of the aborted SSC project The authors examine the complex interrelated causes for its demise including problems of large project management continuing cost overruns and lack of foreign contributions In doing so they ask whether Big Science has become too large and expensive including whether academic scientists and their government overseers can effectively manage such an enormous undertaking Focusing on the scientific technical and political conflicts that led to delays ever rising costs and eventually the SSC s cancelation by Congress Tunnel Visions is a true techno thriller Burton Richter winner of the Nobel Prize in Physics Most good science stories are tales of discovery and success but failure can be just as riveting Here two historians and an archivist describe the greatest particle physics experiment that never was Scientific American

Open Skies Kenneth I. Kellermann, Ellen N. Bouton, Sierra S. Brandt, 2020-06-29 This open access book on the history of the National Radio Astronomy Observatory covers the scientific discoveries and technical innovations of late 20th century radio astronomy with particular attention to the people and institutions involved The authors have made extensive use of the NRAO Archives which contain an unparalleled collection of documents pertaining to the history of radio astronomy including the institutional records of NRAO as well as the personal papers of many of the pioneers of U S radio astronomy Technical details and extensive citations to original sources are given in notes for the more technical readers but are not required for an understanding of the body of the book This book is intended for an audience ranging from interested lay readers to

professional researchers studying the scientific technical political and cultural development of a new science and how it changed the course of 20th century astronomy With a Foreword by Ron Ekers *Formality of the Little N -disks Operad* Pascal Lambrechts, Ismar Volić, 2014-06-05 The little disks operad along with its variants is an important tool in homotopy theory It is defined in terms of configurations of disjoint dimensional disks inside the standard unit disk in and it was initially conceived for detecting and understanding fold loop spaces Its many uses now stretch across a variety of disciplines including topology algebra and mathematical physics In this paper the authors develop the details of Kontsevich's proof of the formality of little disks operad over the field of real numbers More precisely one can consider the singular chains on as well as the singular homology of These two objects are operads in the category of chain complexes The formality then states that there is a zig zag of quasi isomorphisms connecting these two operads The formality also in some sense holds in the category of commutative differential graded algebras The authors additionally prove a relative version of the formality for the inclusion of the little disks operad in the little disks operad when *Accessions of Unlimited Distribution Reports*, 1973-02-16 **Topics in Cryptology - CT-RSA 2020** Stanislaw Jarecki, 2020-02-14 This book constitutes the refereed proceedings of the Cryptographer's Track at the RSA Conference 2020 CT RSA 2020 held in San Francisco CA USA in February 2020 The 28 papers presented in this volume were carefully reviewed and selected from 95 submissions CT RSA is the track devoted to scientific papers on cryptography public key to symmetric key cryptography and from cryptographic protocols to primitives and their implementation security *Half-Life* Frank Close, 2015-02-03 It was at the height of the Cold War in the summer of 1950 when Bruno Pontecorvo mysteriously vanished behind the Iron Curtain Who was he and what caused him to disappear Was he simply a physicist or also a spy and communist radical A protege of Enrico Fermi Pontecorvo was one of the most promising nuclear physicists in the world He spent years hunting for the Higgs boson of his day the neutrino a nearly massless particle thought to be essential to the process of particle decay His work on the Manhattan Project helped to usher in the nuclear age and confirmed his reputation as a brilliant physicist Why then would he disappear as he stood on the cusp of true greatness perhaps even the Nobel Prize In *Half Life* physicist and historian Frank Close offers a heretofore untold history of Pontecorvo's life based on unprecedented access to Pontecorvo's friends and family and the Russian scientists with whom he would later work Close takes a microscope to Pontecorvo's life combining a thorough biography of one of the most important scientists of the twentieth century with the drama of Cold War espionage With all the elements of a Cold War thriller classified atomic research an infamous double agent a possible kidnapping by Soviet operatives *Half Life* is a history of nuclear physics at perhaps its most powerful when it created the bomb Physics at perhaps its most powerful when it created the bomb **Genius in the Shadows** William Lanouette, 2013-09-01 Well known names such as Albert Einstein Enrico Fermi J Robert Oppenheimer and Edward Teller are usually those that surround the creation of the atom bomb One name that is rarely mentioned is Leo Szilard known in scientific circles as father of the atom

bomb The man who first developed the idea of harnessing energy from nuclear chain reactions he is curiously buried with barely a trace in the history of this well known and controversial topic Born in Hungary and educated in Berlin he escaped Hitler s Germany in 1933 and that first year developed his concept of nuclear chain reactions In order to prevent Nazi scientists from stealing his ideas he kept his theories secret until he and Albert Einstein pressed the US government to research atomic reactions and designed the first nuclear reactor Though he started his career out lobbying for civilian control of atomic energy he concluded it with founding in 1962 the first political action committee for arms control the Council for a Livable World Besides his career in atomic energy he also studied biology and sparked ideas that won others the Nobel Prize The Salk Institute for Biological Studies in La Jolla California where Szilard spent his final days was developed from his concepts to blend science and social issues
