PhET Tutorial: Energy Skate Park: Basics

Learning Goal:

To understand conservation of mechanical energy involving gravitational potential energy and kinetic energy.

For this problem, use the PhET simulation *Energy Skate Park: Basics*. This simulation allows you to explore the motion and energetics of a skater riding along a track.

Start the simulation. When you click the simulation link, a new window will load. Click on **Intro** to get started.

You can click and drag the skater to any location and release the skater from rest. Watch the skater skate up and down the track.

Click on **Bar Graph** to see the relative magnitudes of the kinetic, potential, thermal, and total energies as a function of the skater's position. Try **Pie Chart** to see the same information as a pie chart.

Play around with the simulation. When you are done, click on the **Reset** button before answering the questions.

Part A

Click on **Bar Graph**, and observe the kinetic energy bar as the skater goes back and forth. You can select **Slider Motion** below the track for a more accurate observation.

Where on the track is the skater's kinetic energy the greatest?

Hint 1. How to approach the problem

The kinetic energy of an object is given by $K = (1/2)mv^2$, where m is the mass of the object and v is the speed of the object. Thus, the skater is moving the fastest where the skater's kinetic energy is the greatest and vice versa.

Look at the Bar Graph, and identify the location(s) where the skater's kinetic energy reaches its maximum value.

ANSWER:

- The skater's kinetic energy is
- ☐ at its maximum value at the locations where the skater turns and goes back in the opposite direction.
 - ☒ at its maximum value at the lowest point of the track.
 - ☐ the same everywhere.

Correct

The kinetic energy of an object is given by $K = (1/2)mv^2$, where v is the speed of the object and m is the mass of the object. Thus, the skater's kinetic energy is greatest at the lowest point of the track, where the skater is moving the fastest.

Part B

Now observe the potential energy bar on the Bar Graph.

Spending math 68%

Along back and forth, where does the skater have the most potential energy?
