Synthetic Worlds Esther Leslie, 2006-01-16 This revealing study considers the remarkable alliance between chemistry and art from the late eighteenth century to the period immediately following the Second World War Synthetic Worlds offers fascinating new insights into the place of the material object and the significance of the natural the organic and the inorganic in Western aesthetics Esther Leslie considers how radical innovations in chemistry confounded earlier alchemical and Romantic philosophies of science and nature while profoundly influencing the theories that developed in their wake She also explores how advances in chemical engineering provided visual artists with new colors surfaces coatings and textures thus dramatically recasting the way painters approached their work Ranging from Goethe to Hegel Blake to the Bauhaus Synthetic Worlds ultimately considers the astonishing affinities between chemistry and aesthetics more generally As in science progress in the arts is always assured because the impulse to discover is as immutable and timeless as the drive to create

Stuff, Quality, Structure Galen Strawson, 2024-07-10 Stuff Quality Structure makes a case for identity metaphysics It defends categorial monism the view that there s only one fundamental metaphysical category which Strawson calls stuff It argues for the ultimate metaphysical identity of things that other views hold to be irreducibly distinct It rejects separatism which posits such irreducible metaphysical differences The notions of object process property state and event seem to signal fundamental ontological differences but these differences are superficial according to identity metaphysics The same goes for energy force laws of nature causation power according to identity metaphysics these are different ways of conceptualizing the same phenomenon the best name for which is simply the nature of stuff More particularly identity metaphysics opposes 1 object

property separatism and 2 stuff law separatism It then denies that 1 and 2 themselves are fundamentally different issues Strawson also endorses stuff monism the view that there is only one kind of fundamental stuff and favours thing monism the view that there is only one fundamental entity in reality He then considers the place of the notion of structure in an account of concrete reality Structure considered just as such is an abstract wholly logico mathematically characterizable phenomenon If a structure is concretely realized it must be realized by something that isn't itself just a matter of structure It is arguable nevertheless that a thing's structural nature may and perhaps must completely fix its non structural nature in any world or at least in any world to which the notion of structure is generally applicable
