

Classroom Investigation

Purpose

This project-based activity is to investigate the conditions that affect the gravitational force between a planet and its moons.

Procedure/Analysis

1. A group will be given one standardized simulation software (the Earth, Moon, and Mars) to use. Students will use the simulation to plot and observe the gravitational force vector in the diagram below about a 100 km radius planet with a satellite at height h . The gravitational vector magnitude of the planet acting upon the moon at the designated heights from the sun-like star should be represented as of the gravitational force.

2. In this investigation, determine gravitational force and distance of separation (between moon and planet) and describe an object relationship. www.khanacademy.org
 In planet simulation, how great is the force?
 Answer: Gravitational force is between the sun and the planet.
3. How does the simulation allow, gravitational effect, the force of the satellite moon pulling upon the larger planet? How? I say the distance is closer, the force is that upon the planet. Gravitational force is stronger the closer the satellite moon is to the planet. Answer: The force is stronger the closer the satellite moon is to the planet.
 In planet simulation, how great is the force?

I suggest to use a simulation that shows the force of gravity between the sun and the planets. I have a link to it.
