

Main Ideas, Key Points, Questions:

After watching the video segment, write about key points, main ideas, and big questions.

- Understand that gravity is one of the four fundamental forces in the universe.
- Calculate gravitational force by using Newton's Law of Gravitation and the formula derived from this law for weight.
- Explain that the acceleration due to gravity on Earth is 9.8 m/s² and this number will change if you are on an object with different mass.
- Illustrate the idea that an object falling through the air will continue to accelerate until air resistance balances out gravity.

Objective(s):

- Define the force of gravity as the masses of the objects involved in the gravitational interaction and the distance between their centers of mass.
- Distinguish how changing the mass of one or both objects, or the distance between the objects, affects the force of gravity between them.

Notes:

During the video segment, use words, phrases, or drawings to take notes.

- everything with mass has a gravitational force
 - objects with more mass have more pull
- **Newton's Universal Law of Gravitation:** the gravitational force between two objects increases with and is proportional to the increasing mass and decreases with increasing distance between them
- **Inverse-Square Law:** force decreases with a square of the distance
 - if the distance between two objects were doubled, the force between them would be 4 times smaller
 - $F_G \propto (1/r)^2$
- one newton is equivalent to the amount of force required to accelerate 1kg of mass at the rate of 1 m/s² in the direction of the applied force
- **the gravitational force is newtons between two objects separated by some distance**
 - $F_G = G(m_1m_2)/r^2$
 - r being distance and m₁ and m₂ being the mass of objects 1 and 2 respectively
 - G is equal to 6.674 × 10⁻¹¹ newton(kg)(m²)
- **W = mg**
 - W is weight, m is mass of the object, and g is the acceleration of Earth's gravity

Summary:

After watching the video segment, write at least three sentences explaining what you learned. You may ask yourself: "If I was going to explain this to someone else, what would I say?"

The strength of gravitational force between two objects is inversely proportional to the square of the distance between them. All objects with mass exert a gravitational force, even if too small to be noticed. A falling object will no longer accelerate by Earth's gravity once the air resistance drag is equivalent to the force of Earth's gravity, terminal velocity.

Mathematical Horizons For Quantum Physics Huzihiro Araki,Leong-chuan Kwek,Jun Suzuki,Berthold-georg Englert,2010-06-28 Quantum theory is one of the most important intellectual developments in the early twentieth century The confluence of mathematics and quantum physics emerged arguably from Von Neumann s seminal work on the spectral theory of linear operators This volume arose from a two month workshop held at the Institute for Mathematical Sciences at the National University of Singapore in July September 2008 on mathematical physics focusing specifically on operator algebras in quantum theory This volume is essentially written for graduate students and young researchers so that they can acquire a gentle introduction to the application of operator algebras to quantum information sciences chaotic and many body problems Several lecture notes delivered during the workshop by experts in the field were specially commissioned for this volume **Whitaker's Cumulative Book List** ,1982
