a centrally planned economy based on physical not income measurements This book provides a detailed assessment of the failure of the AFC method to measure the real growth of actual market production during the transition period This book provides a detailed account of the application of national income measurements to the centrally planned economies It assesses all of the major contributors to this debate including Colin Clark Naum Jasny Alexander Gerschenkron G Warren Nutter and Abram Bergson It provides a new much higher estimate of the expansion of market production during the transition period based on an estimate of the actual growth of real market production It discusses the very significant implications of this re estimate for contemporary theories of globalisation

Intellectual Teamwork Jolene Galegher, Robert E. Kraut, Carmen Egido, 2014-01-14 This book seeks to establish an interdisciplinary applied social scientific model for researchers and students that advocates a cooperative effort between machines and people After showing that basic research on social processes offers much needed guidance for those creating technology and designing tools for group work its papers demonstrate the mutual relevance of social science and information system design and encourage better integration of these disciplines This comprehensive collection closely examines the variety of electronic tools being deployed to solve traditional problems in communication and coordination Unfortunately research shows that these tools have not been as successful as their designers had envisioned partially because they were not always produced with the needs and goals of their human users in mind The editors goal is to entice more social scientists to orient their research around questions of practical interest to information system designers and to convince designers to search for the knowledge about social and organizational behavior that would make their tools more useful
