Physics HI May 2013:

The High Luminosity Large Hadron Collider Oliver Brüning, Lucio Rossi, 2015-08-28 This book provides a broad introduction to the physics and technology of the High Luminosity Large Hadron Collider HL LHC This new configuration of the LHC is one of the major accelerator projects for the next 20 years and will give new life to the LHC after its first 15 year operation Not only will it allow more precise measurements of the Higgs boson and of any new particles that might be discovered in the next LHC run but also extend the mass limit reach for detecting new particles The HL LHC is based on the innovative accelerator magnet technologies capable of generating 11.3 Tesla fields with effectiveness enhanced by use of the new Achromatic Telescopic Squeezing scheme and other state of the art accelerator technologies such as superconducting compact RF crab cavities advanced collimation concepts and novel power technology based on high temperature superconducting links The book consists of a series of chapters touching on all issues of technology and design and each chapter can be read independently The first few chapters give a summary of the whole project of the physics motivation and of the accelerator challenges The subsequent chapters cover the novel technologies the new configurations of LHC and of its injectors as well as the expected operational implications Altogether the book brings the reader to the heart of technologies for the leading edge accelerator and gives insights into next generation hadron colliders **Future Research**

Infrastructures: Challenges and Opportunities S. Bertolucci, L. Palumbo, 2016-12-20 Particle accelerators have attracted much interest and expectation from the international scientific community and these show no sign of diminishing Major world research laboratories have either planned or are envisaging the construction of new accelerators in order to foster the progress of science in many fields from high energy physics to cultural heritage and the environment This book presents 13 papers from the workshop Future Research Infrastructures Challenges and Opportunities held as part of the series of the Enrico Fermi International School of Physics in Varenna Italy in July 2015 The workshop combined presentations on the science of particle accelerators and their applications with talks on the development of future accelerators and the papers included here cover a diverse range of topics including the European Spallation Source the Swiss Light Source accelerator projects in Korea future circular colliders synchrotron based techniques for cultural heritage and the new research horizon in hadron therapy The book also includes a summary of the panel discussion on the need for international world infrastructures

High Luminosity Large Hadron Collider, The: The New Machine For Illuminating The Mysteries Of Universe Oliver Brüning, Lucio Rossi, 2015-08-28 This book provides a broad introduction to the physics and technology of the High Luminosity Large Hadron Collider HL LHC This new configuration of the LHC is one of the major accelerator projects for the next 20 years and will give new life to the LHC after its first 15 year operation Not only will it allow more precise measurements of the Higgs boson and of any new particles that might be discovered in the next LHC run but also extend the mass limit reach for detecting new particles The HL LHC is based on the innovative accelerator magnet technologies capable

of generating 11.13 Tesla fields with effectiveness enhanced by use of the new Achromatic Telescopic Squeezing scheme and other state of the art accelerator technologies such as superconducting compact RF crab cavities advanced collimation concepts and novel power technology based on high temperature superconducting links The book consists of a series of chapters touching on all issues of technology and design and each chapter can be read independently The first few chapters give a summary of the whole project of the physics motivation and of the accelerator challenges The subsequent chapters cover the novel technologies the new configurations of LHC and of its injectors as well as the expected operational implications Altogether the book brings the reader to the heart of technologies for the leading edge accelerator and gives insights into next generation hadron colliders

High Luminosity Large Hadron Collider, The: New Machine For Illuminating The Mysteries Of The Universe (Second Edition) Lucio Rossi, Oliver Bruning, 2024-02-06 This book introduces the physics and technology of the High Luminosity Large Hadron Collider LHC highlighting the most recent modifications that shaped the final configuration which is now in the advanced stages of its construction This new High Luminosity configuration of the LHC is the major accelerator project of this decade and will give new life to the LHC after its first fifteen years of operation allowing for more precise measurements of the Higgs Boson and extending the mass limit reach for new particles The LHC is such a highly optimized machine that upgrading it requires breakthroughs in many areas Unsurprisingly the High Luminosity LHC required a long R D period to bring into life an innovative accelerator magnet based on Nb₃Sn and capable of generating fields in the 11.12 T range as well as many other new accelerator technologies such as superconducting compact RF crab cavities advanced collimation concepts a novel powering technology based on high temperature superconducting links and others The book is a self consistent series of papers which addresses all technology and design issues Each paper can be read separately as well The first few papers provide a summary of the whole project the physics motivation and the accelerator challenges Altogether this book brings the reader to the heart of the technologies that will also be key for the next generation of hadron colliders This book is an essential reference for physicists and engineers in the field of hadron colliders and LHC related issues and can also be read by postgraduate students
