

AS Level Physics Practical Paper 3

Paper format:

There are two questions in each paper. Each question should take one hour as both questions are of 30 marks.

Question number 1:

Outline: it requires candidate to collect data, plot a graph and draw simple conclusions.

Question number 2:

Outline: No graph will be required. It will require candidates to follow an inaccurate method, take several readings and then evaluate the results. It requires candidates to identify the problems faced in experiment and suggest improvements that can be made.

Now, before starting on the tips to ace the **Physics Practical Paper 3**, you should keep this thing in mind that most of the marks are for working, presentation and conclusions. So even if your practical work is not very accurate you should move to the tables, graph and working without wasting time in making it more accurate. There are only 3 marks of quality on whole paper. Why lose rest of the marks due to 3 marks only? Don't get me wrong though, I don't mean that don't do the practical accurately but I mean to say that don't waste extra time in making it more accurate and leaving no time to complete rest of the paper.

I will discuss each point given in the **Mark Scheme** below.

Question 1:

In this question, first set up the apparatus in exactly the same manner as shown on the question paper. The first part of this question usually involves measuring something like diameter of a wire, length of some part of experiment apparatus, potential difference, current etc. While measuring you should ensure that you present the data to the appropriate number of significant figures so that it reflects the least count of the device being used for example:

1. **Micrometer Screw Gauge***: 0.01 mm
2. **Meter rule**: 0.5 mm
3. **Vernier Caliper****: 0.1 mm
4. **Protractor**: 0.5 degrees
5. **Graduated cylinder**: 1/2 of the least count
6. **Time**: 1 decimal place

And, yes, represent your all data in the SI units: meter (m) for length, radius etc.

In some cases, you have to measure something and judging by the space provided you have to show the evidence that you have taken repeated readings and averaged them out. Say you have to measure the diameter of a sample of wire, so using the micrometer screw gauge take 3 readings in three different parts along the length of the wire and show:

$$d = (d_1 + d_2 + d_3)/3$$

and show the value calculated. Also remember to add appropriate units along with the individual readings you measure.

Then it says to repeat the procedure and get six different sets of data in a table. Students often have this thing out of their mind that the presentation is important and CIE in its examiner's report terms such students as 'weak candidates'. So first thing first, know how many variable you have to measure and/or calculate so you could draw appropriate columns.

Now before moving onto how to construct a 'nice' table, let's first consider what actually is demanded by the examiner in the table. A 'nice' table should have these features:
