AP Physics Chapter 6 review

Circular Motion

- Circumference is the distance an object travels in a circle. $C = 2\pi r$
- Circular motion is defined by the equation $F_c = ma_c = \frac{mv^2}{r}$ where m is mass, v is velocity, r is the radius of the circular path, F_c is the centripetal force, and a_c is the centripetal acceleration.
 - Velocity is tangential velocity, or the distance the object travels divided by the time. $v = \frac{2\pi r}{T}$
 - The velocity vector will always be tangent to the path of the object, and perpendicular to the centripetal force and centripetal acceleration vectors.
 - Period, T , is defined as the time it takes for the object to travel one complete revolution.
 - The distance traveled in one revolution is equal to the circumference, $2\pi r$.
- Centripetal force is defined as the force required to keep an object on a circular path at a constant speed. If the centripetal force is no longer applied, the object will continue to move in a straight line.
 - If the object is travelling at a constant speed along a circular path, the centripetal force will be constant.
 - Centripetal force always points toward the center of the circle.
 - Centripetal force will be the vector sum of all the forces on the object, $F_{net,c}$, and can include the force of gravity, normal force, static friction, tension, or any other force.
- Centripetal acceleration is defined as the acceleration of an object on a circular path at a constant speed.
 - Centripetal acceleration always points toward the center of the circle.
 - If the centripetal force is gravity, such as in an orbit, the centripetal acceleration will be the acceleration of gravity.
- Angular velocity, ω , is how fast the object is moving in terms of angle. Possible units include rpm, rad/s, or degrees per minute. $V_t = \omega r$ ONLY when ω is rad/s.
- An object within an object, ex. a passenger in a car, on a circular path will perceive a force pushing them away from the center of the path. To a stationary observer, this is not an actual force, merely a perceived one. This perceived force is known as centrifugal force.
