Machine learning and artificial intelligence increasingly use methodological tools rooted in statistical physics Conversely limitations and pitfalls encountered in AI question the very foundations of statistical physics This interplay between AI and statistical physics has been attested since the birth of AI and principles underpinning statistical physics can shed new light on the conceptual basis of AI During the last fifty years statistical physics has been investigated through new geometric structures allowing covariant formalization of the thermodynamics Inference methods in machine learning have begun to adapt these new geometric structures to process data in more abstract representation spaces This volume collects selected contributions on the interplay of statistical physics and artificial intelligence The aim is to provide a constructive dialogue around a common foundation to allow the establishment of new principles and laws governing these two disciplines in a unified manner The contributions were presented at the workshop on the Joint Structures and Common Foundation of Statistical Physics Information Geometry and Inference for Learning which was held in Les Houches in July 2020 The various theoretical approaches are discussed in the context of potential applications in cognitive systems machine learning signal processing Research Paper ... of the Division of Building Research ,1973 **Geology of National Parks of**

Central/Southern Kenya and Northern Tanzania Roger N. Scoon,2018-04-09 This book describes the interrelationship between the spectacular geology of an area of East Africa that includes a branch of the rift valley as well as giant freestanding ice capped mountains and extraordinarily toxic alkaline lakes and some of the greatest concentrations of wildlife on Earth It suggests that geological processes that have shaped the iconic landforms including active volcanoes may also be responsible for the unusually diverse speciation which characterises the region Moreover it is not a coincidence that important palaeoanthropological discoveries have been unearthed in the region National parks and conservation areas have tremendous potential for geotourism and the book assists both tour guides and visitors in this regard In addition the book may provide a better understanding to management of the importance of geology for sustaining wildlife *The Gregory Rift Valley and Neogene-recent Volcanoes of Northern Tanzania* John Barry Dawson,2008 The structure and volcanic activity of the northern Tanzania sector of the Gregory Rift Valley have hitherto been less well described than those in Ethiopia and Kenya This book focuses on northern Tanzania where although the volcanic area is smaller than those to the north there are major features such as Kilimanjaro the highest mountain on the African continent Ngorongoro one of the largest calderas on Earth and Oldoinyo Lengai the world s only active carbonatite volcano Following an account of the discovery and early

exploration of the rift valley there are descriptions of the individual volcanoes These are set within the context of the regional geology and geophysics of the rift valley and in relation to the structural evolution of the rift and its associated sedimentary basins which include Olduvai an important site in the history of human evolution The volume concludes with a discussion of the volcanism as related to the plume related African Superswell
