

tho as well) and for recalibrating (which is the same as syncing for all other mounts). After polar alignment and recalibrating, PHD2 will be used for guiding the scope. Therefore, the AP keypad will only be used at the start of my imaging session, and no more. Thus, it is hard for me to justify spending \$1000 for an AP keypad when I will hardly use.

I had to figure out a solution.

And here's my solution:

- I have built a simple hand controller for my Mach1GTO. Its purpose is **not** to replace the AP keypad because it does not initialize the GTOCP4, have any star database or goto capability etc. My goal is to just move the mount for calibrating the mount to a star and be compatible with PoleMaster.

3 The hand controller hardware guide

The hand controller plugs into the GTOCP3 or GTOCP4 keypad port.

The hand controller does **NOT** have the RECAL option. This is a deliberate design decision. This is so that there will never be any confusion about which device will RECAL – it will always be the computer that is connected to the mount.

3.1 The buttons and joystick action guide

The actions associated with the buttons and joystick are defined in the table shown below. The shortcuts for that are used in this manual are also defined here.

Practical Introduction to Beam Physics and Particle Accelerators Santiago Bernal, 2018-10-26 This book provides a brief exposition of the principles of beam physics and particle accelerators with an emphasis on numerical examples employing readily available computer tools However it avoids detailed derivations instead inviting the reader to use general high end languages such as Mathcad and Matlab as well as specialized particle accelerator codes e.g. MAD WinAgile Elegant

and others to explore the principles presented This approach allows readers to readily identify relevant design parameters and their scaling In addition the computer input files can serve as templates that can be easily adapted to other related situations The examples and computer exercises comprise basic lenses and deflectors fringe fields lattice and beam functions synchrotron radiation beam envelope matching betatron resonances and transverse and longitudinal emittance and space charge The last chapter presents examples of two major types of particle accelerators radio frequency linear accelerators RF linacs and storage rings Lastly the appendix gives readers a brief description of the computer tools employed and concise instructions for their installation and use in the most popular computer platforms Windows Macintosh and Ubuntu Linux Hyperlinks to websites containing all relevant files are also included An essential component of the book is its website actually part of the author s website at the University of Maryland which contains the files that reproduce results given in the text as well as additional material such as technical notes and movies [Interactive Physics Version 5.0](#) MSC. Current Topics in Elementary Particle Physics K. H. Mutter, 2013-03-09 This volume contains the contributions to the INTERNATIONAL SUMMER INSTITUTE ON THEORETICAL PHYSICS 1980 held from September 1st to September 12th in Bad Honnef Germany This Institute was organized by Wuppertal University It was the eleventh in a series of Summer Schools on particle physics carried out by German Universities The Institute was aimed to review the present status of gauge theories in elementary particle physics with emphasis both on the phenomenological and formal aspects The first part of the volume covers the recent progress in the development of perturbative methods both in quantum chromodynamics QCD and flavor dynamics QFD Applications to available data from electron positron storage rings and deep inelastic scattering are discussed The second part presents new results on classical solutions and non perturbative methods in gauge theories and related field theories like non linear σ models A very topical account is given on the application of Monte Carlo methods within lattice gauge theories At present these methods appear to be the most promising technique to establish the quark confinement hypothesis within the framework of non Abelian gauge theories The volume is closed with a progress report on the present understanding of supergravity and its relation to grand unification schemes The lectures on Grand Unified Theories given by Dr D V Nanopoulos at the Bad Honnef meeting can be found in the proceedings of the 1980 Rencontre de Moriond Ed J Tran Thanh Van
