

Reflection and Refraction

What You Need To Know:

The Physics Now that you have completed all of the labs dealing with circuits, you will move on to the next area of physics, light and optics. In this lab you will be exploring the first part of optics, the reflection and refraction of light at a plane (flat) surface and a curved surface.

FIGURE 1 - Reflection off of a mirror

Reflection occurs when an incident ray of light bounces off of a smooth flat surface like a mirror. See **Figure 1**. *Refraction* occurs when a ray of light that is traveling in one medium, let's say air, enters a different medium, let's say glass, and changes the direction of its path. See **Figure 2**.

In order to describe reflection or refraction at a plane surface you need to measure angles with respect to a common reference line. The reference line that is used is called a *normal*. A normal is a line that is perpendicular to a surface. In **Figure 1** you see a ray of light that is incident on a plane surface. The *angle of incidence*, θ_i , of a ray of light is defined as the angle between the incident ray and the normal. If the surface is a mirror, then the *angle of reflection*, θ_r , of a ray of light is defined as the angle between the reflected ray and the normal.
