Nanolithography and Patterning Techniques in Microelectronics D Bucknall,2005-09-30 Currently surface patterning is achieved by means of optical lithographic techniques but with industry moving towards the fabrication of devices with size features of 100 nm less the technological community is looking for alternative approaches to materials fabrication at the nanoscale By using nanolithography scientists can drive patterning currents through surfaces while building a 3D structure from a series of patterned layers Electron induced chemical lithography can create ultra high resolution templates for the site selective immobilisation of molecules to form functional hierarchic

Polymer and Composite Rheology, Second Edition, Rakesh K. Gupta,2000-06-14 An analysis of polymer and composite rheology This second edition covers flow properties of thermoplastic and thermoset polymers and general principles and applications of all phases of polymer rheology with new chapters on the rheology of particulate and fibre composites It also includes new and expanded detail on polymer blends and emulsions foams reacting systems and flow through porous media as well as composite processing operations

Inorganic Biomaterials Xiang C Zhang,2014-06-26 This book provides a practical guide to the use and applications of inorganic biomaterials It begins by introducing the concept of inorganic biomaterials which includes bioceramics and bioglass This concept is further extended to hybrid biomaterials consisting of inorganic and organic materials to mimic natural biomaterials The book goes on to provide the reader with information on biocompatibility bioactivity and bioresorbability The concept of the latter is important because of the increasing role resorbable biomaterials

are playing in implant applications The book also introduces a new concept on mechanical compatibility mechacompatibility Almost all implant biomaterials employed to date such as metal and ceramic implants do not meet this biological requirement as they have far higher modulus than any biomaterials in the body The practical techniques that are used in the characterization of biomaterials including chemical physical biological microscopy and mechanical characterization are described Some specialised techniques are also introduced such as Synchrotron Micro Computed Tomography u CT and Magnetic Resonance Imaging MRI The reader is given important information on new biomaterials development for orthopaedic and other areas including controlled release technology hydroxyapatite and hybrid bioresorbable materials Finally the book provides a guide to regulatory considerations an area which is often overlooked but is an important part of R D and manufacturing of medical materials and devices
