INTRODUCTION

In the [Population Dynamics](#) Click & Learn, you'll explore a powerful tool for learning about populations: mathematical models. As you'll see by doing the Click & Learn and this activity, you can use models to answer questions, solve problems, and make predictions about all kinds of populations — from bacteria in your body, to wildlife across the world, to our own human populations.

PART 1: Introduction to Population Dynamics

PART 2: Exploring the Exponential Growth Model

Open the "Exponential growth model" tab and read the "Introduction" section.

Other bacteria, populations in recovery from a disaster, or populations in ideal conditions for reproduction.

4. Complete the following table to explain the *biological* meanings of the symbols in the exponential growth model. For each explanation, give a specific example using the population you described above.

| Symbol | Biological Meaning | Specific Example |
|---------|--------------------------------------------------------------------|---------------------------------------------------------------------|
| N | The number in the population | how many bacteria are in the population |
| t | Time we are using as a measure | 1 day |
| dN/dt | The change in population size over the change in reproduction time | In one day, there was an increase from x bacteria to y bacteria |
| r | Rate of reproduction | 1.1 bacteria per minute. |
| N_0 | Initial population | There were initially z bacteria |

5. Both dN/dt and r are types of growth rates. What are the differences between them?

While the first represents population growth rates as a whole, r is based more in birth/death rates per
