Lift Unit Motor

Lift motor is hard to the lift unit when lifting. It is necessary the lift of the system to pump water (see Figure 1.10) before the pump, control device is connected in series with the pump motor (when the pump is raised to that upper limit, the solenoid valve on the cylinder plate activates the pump). The pump the motor and deenergize the lift solenoid which in turn removes power from the lift motor.

Water Control

A transfer control system is used in the Water. The system automatically controls the water pump and can be converted from OFF to full ON without speed step or increments. The heart of this control system is the water controller.

The water controller is basically a high-power semiconductor switch. An array of power transistors are connected in parallel and control the current in the motor windings.
