Colvin,Lester Gray French,1959 *Methods for Reliability Improvement and Risk Reduction* Michael Todinov,2018-10-10 Reliability is one of the most important attributes for the products and processes of any company or organization This important work provides a powerful framework of domain independent reliability improvement and risk reducing methods which can greatly lower risk in any area of human activity It reviews existing methods for risk reduction that can be classified as domain independent and introduces the following new domain independent reliability improvement and risk reduction methods Separation Stochastic separation Introducing deliberate weaknesses Segmentation Self reinforcement

Inversion Reducing the rate of accumulation of damage Permutation Substitution Limiting the space and time exposure
Comparative reliability models The domain independent methods for reliability improvement and risk reduction do not
depend on the availability of past failure data domain specific expertise or knowledge of the failure mechanisms underlying
the failure modes Through numerous examples and case studies this invaluable guide shows that many of the new domain
independent methods improve reliability at no extra cost or at a low cost Using the proven methods in this book any company
and organisation can greatly enhance the reliability of its products and operations **Subject Guide to Books in Print**
