Convergent Evolution Vincent L. Bels, Anthony P. Russell, 2023-03-01 This volume presents a series of case studies at different levels of inclusivity of how organisms exhibit functional convergence as a key evolutionary mechanism resulting in responses to similar environmental constraints in mechanically similar ways The contributors to this volume have selected and documented cases of convergent evolution of form and function that are perceived to be driven by environmental abiotic and or biotic challenges that fall within their areas of expertise Collectively these chapters explore this phenomenon across a broad phylogenetic spectrum The sequence of chapters follows the organizational principle of increasing phylogenetic inclusivity rather than the clustering of chapters by perceived similarity of the phenotypic features or biomechanical challenges being considered This is done to maintain focus on the evolutionary phenomenon that is the primary subject matter of the book thereby providing a basis for discussion among the readership about what is necessary and sufficient to justify the recognition of functional convergence All chapters stress the need for integrative approaches for the elucidation of both pattern and process as they relate to convergence at various taxonomic levels Systems

Orthodontics Pietro Auconi, Guido Caldarelli, Antonella Polimeni, 2024-09-16 This book marks one of the first applications of the Medicine Network discipline to an everyday scenario It explores situations where patients often in adolescence grapple with the decision of whether to commence a treatment seeking insights into the more plausible future scenarios Additionally the specific feedback from biological systems in the human body serves as a potent metaphor for addressing various challenges in the field of Complex Systems In recent times systems thinking and complexity theory have yielded substantial conceptual advancements across various research domains In the context of orthodontics these approaches offer a more comprehensive understanding in contrast to the traditional mechanistic approach which primarily focuses on the analysis of applied forces Systems thinking directs attention to the interaction among dentoskeletal components where the behavior of one element can influence others The amalgamation of multiple elements leads to entities with properties distinct from those of individual components The increasing complexity of orthodontic reality beyond clinical or radiological observations necessitates the development of new theories Complexity theory has demonstrated that emergent properties in biological systems can be discerned through appropriate computational models as opposed to the analytical study of individual components The central metaphor for the interactive craniofacial system during growth is portrayed by the facial topology

revealed through network analysis facilitating a systemic reevaluation of traditional orthodontic theories This book delineates the novel insights derived from the clinical computational approach applicable for a prognostic and early interception perspective in managing dentofacial dysmorphoses Its objective is to captivate practitioners and persuade them of the practical utility of these innovative approaches
