Interdisciplinary Explorations of Postmortem Interaction Estella Weiss-Krejci, Sebastian Becker, Philip Schwyzer, 2022-06-23

In the present as in the past the dead have been deployed to promote visions of identity as well as ostensibly wider human values. Through a series of case studies from ancient Egypt through prehistoric historic and present day Europe this book discusses what is constant and what is locally and historically specific in our ways of interacting with the remains of the dead their objects and monuments. Postmortem interaction encompasses not only funerary rituals and intergenerational engagement with forebears but also concerns encounters with the dead who died centuries and millennia ago. Drawing from a variety of disciplines such as archaeology bioarchaeology literary studies ancient Egyptian philology and sociocultural anthropology this volume provides an interdisciplinary account of the ways in which the dead are able to transcend temporal distances and engender social relationships. Until quite recently literary sciences and archaeology were generally regarded as incommensurable in their aims methodologies and source material. Although archaeologists and literary critics have been increasingly willing to borrow concepts and terminology from the other discipline this book is one example of a genuinely collaborative endeavor. This is an open access book.

Exascale Scientific Applications Tjerk P.

Straatsma, Katerina B. Antypas, Timothy J. Williams, 2017-11-13

From the Foreword The authors of the chapters in this book are the pioneers who will explore the exascale frontier. The path forward will not be easy. These authors along with their colleagues who will produce these powerful computer systems will with dedication and determination overcome the scalability problem discover the new algorithms needed to achieve exascale performance for the broad range of applications that they represent and create the new tools needed to support the development of scalable and portable science and

engineering applications Although the focus is on exascale computers the benefits will permeate all of science and engineering because the technologies developed for the exascale computers of tomorrow will also power the petascale servers and terascale workstations of tomorrow These affordable computing capabilities will empower scientists and engineers everywhere Thom H Dunning Jr Pacific Northwest National Laboratory and University of Washington Seattle Washington USA This comprehensive summary of applications targeting Exascale at the three DoE labs is a must read Rio Yokota Tokyo Institute of Technology Tokyo Japan Numerical simulation is now a need in many fields of science technology and industry The complexity of the simulated systems coupled with the massive use of data makes HPC essential to move towards predictive simulations Advances in computer architecture have so far permitted scientific advances but at the cost of continually adapting algorithms and applications The next technological breakthroughs force us to rethink the applications by taking energy consumption into account These profound modifications require not only anticipation and sharing but also a paradigm shift in application design to ensure the sustainability of developments by guaranteeing a certain independence of the applications to the profound modifications of the architectures it is the passage from optimal performance to the portability of performance It is the challenge of this book to demonstrate by example the approach that one can adopt for the development of applications offering performance portability in spite of the profound changes of the computing architectures Christophe Calvin CEA Fundamental Research Division Saclay France Three editors one from each of the High Performance Computer Centers at Lawrence Berkeley Argonne and Oak Ridge National Laboratories have compiled a very useful set of chapters aimed at describing software developments for the next generation exa scale computers Such a book is needed for scientists and engineers to see where the field is going and how they will be able to exploit such architectures for their own work The book will also benefit students as it provides insights into how to develop software for such computer architectures Overall this book fills an important need in showing how to design and implement algorithms for exa scale architectures which are heterogeneous and have unique memory systems The book discusses issues with developing user codes for these architectures and how to address these issues including actual coding examples Dr David A Dixon Robert Ramsay Chair The University of Alabama Tuscaloosa Alabama USA
