Plant Taxonomy: Classical and Modern Methods Freddie Casey, 2020-09-15 The science that finds, identifies, classifies, describes, and names plants is called plant taxonomy. It is closely associated with plant systematics. Plant taxonomy facilitates an organized system for the cataloging and naming of specimens. Identification, classification, and description are the main goals of plant taxonomy. Plant identification is a process of identifying an unknown plant by comparing it with previously collected specimens or through an identification manual. Plant classification is the practice of placing known plants into categories or groups to show some relationship. Giving a formal description of a newly discovered species, usually in the form of a scientific paper using ICN guidelines, is called plant description. This book provides significant information about this discipline to help develop a good understanding of plant taxonomy and related fields. Coherent flow of topics, student-friendly language, and extensive use of examples make it an invaluable source of knowledge. This book will prove to be immensely beneficial to students and researchers in this field of study.
