Plant Responses to Stimuli

Three overlapping worksheets titled "Plants Response to Stimuli" are shown. The worksheets include sections for "Response to Light", "Response to Gravity", and "Response to Water". Each section contains a picture of a plant and a text box explaining the response.

Plants Response to Stimuli

For each picture, select either, true, if the picture shows a response to gravity, or false, if the picture does not show a response to gravity.

Response to Light

Growing toward light is one way the plants respond to their environment. Growing towards light helps plants make more food.

Response to Gravity

A plant's roots respond to gravity by growing downwards. A plant's stem responds to gravity by growing upwards, away from the pull of gravity.

Response to Water

Plants respond to water by growing towards it.

Plant Responses to Salt Stress Keni Cota-Ruiz, Zulfiqar Ali Sahito, Adalberto Benavides-Mendoza, 2024-09-13 Feeding the growing world population will require a significant increase in agricultural production However food overproduction needs to be achieved while crops and plants face salinized soils water deficits lesser arable lands drought and climate change among other factors Salinity impairs plant functioning at multiple levels For instance excess salt contents cause higher osmotic pressures nutritional disorders seed germination inhibition and growth suppression Plants respond to this aggression by activating several metabolic pathways including but not limited to regulating hormone dependent processes repressing growth related genes and eliciting the antioxidant response system Worldwide lands under irrigation practices are experiencing higher salt content impacting plant performance and causing significant drops in yields Therefore understanding how cultivars and plants respond to adverse environments such as salt excess in soils as well as investigating novel approaches to boost stressed plant physiological performance are vital components that need to be addressed if we are to achieve food security Multiple genes involved in the ABA signaling pathways are known to respond and start plant adaptive responses when facing salt stress In addition several transcription factors such as the phytochromes and zinc finger proteins play roles in regulating the morphological responses of plants under stress Antioxidant enzymes are also upregulated in response to higher content of salt Recently nanobiotechnological approaches aimed at delivering cargoes such as micronutrients or chemicals in a cell specific manner are a promising alternative to aid plants in combating stress Similarly using nanofertilizers shows favorable effects in plants under hostile environments CRISPR CAS is an emerging powerful and feasible tool to modify genes and be applied to plants to make them more tolerant to salt in excess
