The book compares the accumulated experiences of the use of economic policy instruments in the U S and Europe as well as in rich and poor countries in Asia Africa and Latin America. Ambitious in scope it discusses the design of instruments that can be employed in any country in a wide range of contexts including transportation industrial pollution water pricing waste fisheries forests and agriculture. While deeply rooted in economics **Policy Instruments for Environmental and Natural Resource Management** is informed by political legal ecological and psychological research. The new edition enhances what has already been widely hailed as a highly innovative work. The book includes greatly expanded coverage of climate change covering aspects related to policy design international equity and discounting voluntary carbon markets permit trading in United States and the Clean Development Mechanism. Focusing ever more on leading ideas in both theory and policy the new edition brings experimental economics into the main of its discussions. It features expanded coverage of the monitoring and enforcement of environmental policy technological change the choice of policy instruments under imperfect competition and subjects such as corporate social responsibility bio fuels payments for ecosystem services and REDD.

**Policy Instruments for Environmental and Natural Resource Management** Thomas Sterner, 2003 **Policy Instruments for Environmental and Natural Resource Management** uses economic political legal ecological and psychological perspectives to encourage more widespread and careful use of economic policy instruments in a wide range of contexts.

**Policy Instruments for Environmental and Natural Resource Management** Thomas Sterner, 2010-09-30 As Thomas Sterner points out the economic toolkit for dealing with environmental problems has become formidable. It includes taxes charges permits deposit refund systems labeling and other information disclosure mechanisms. Though not all these devices are widely used empirical application has started within some sectors and we are beginning to see the first systematic efforts at an advanced policy design that takes due account of market based incentives. Sterner's book encourages more widespread and careful use of economic policy instruments. Intended primarily for application in developing and transitional countries the book compares the accumulated experiences of the use of economic policy instruments in the U S and Europe as well as in select rich and poor countries in Asia Africa and Latin America. Ambitious in scope the book discusses the design of instruments that can be employed in a wide range of contexts including transportation industrial pollution water pricing waste fisheries forests and agriculture. **Policy Instruments for Environmental and Natural Resource Management** is deeply rooted in economics but also informed by perspectives drawn from political legal ecological and psychological research. Sterner notes that in addition to meeting requirements for efficiency the selection and design of policy instruments must satisfy criteria involving equity and political acceptability. He is careful to distinguish between the well designed plans of

policymakers and the resulting behavior of society A copublication of Resources for the Future the World Bank and the Swedish International Development Cooperation Agency Sida     Training Resource Manual ,2009 The Manual provides step by step guidance to assist instructors in training policymakers and practitioners in the use of economic instruments pollution taxes user fees property rights etc for sustainable development in general and for environmental and natural resource management in particular Designed as an interactive working document composed of flexible modules and exercises and providing guidance for trainers and course participants the manual offers substantial flexibility for trainers to custom design courses that meet local needs and priorities     Environmental and Natural Resource Economics Thomas H.

most challenging issues relating to China's low carbon development. This study maps out a deep carbon reduction scenario and analyzes economic policies that shift carbon use and shows how China can take strong and decisive action to make deep reductions in carbon emission over the next forty years while maintaining high economic growth and minimizing adverse effects of a low carbon transition. Moreover, these reductions can be achieved within the finite global carbon budget for greenhouse gas emissions as determined by the hard constraints of climate science. The authors make the compelling case that a transition to a low carbon economy is an essential part of China's development and modernization. Such a transformation would also present opportunities for China to improve its energy security and move its economy higher up the international value chain. They argue that even in these difficult economic times, climate change action may present more opportunities than costs. Such a transformation for China and the rest of the world will not be easy. But it is possible, necessary, and worthwhile to pursue.

**Tackling Long-Term Global Energy Problems** Daniel Spreng, Thomas Flüeler, David L. Goldblatt, Jürg Minsch, 2012-01-03. This book makes a case for a multidisciplinary and transdisciplinary approach to energy research, one that brings more of the social sciences to bear. Featuring eight studies from across the spectrum of the social sciences, each applying multiple disciplines to one or more energy-related problems, the book demonstrates the strong analytical and policy-making potential of such a broadened perspective. Case studies include energy transitions of households in developing countries, the curse of oil politics, and visions for renewables, economics, and ethics in emissions trading and carbon capture and storage.

Smart Mixes for Transboundary Environmental Harm Judith van Erp, Michael Faure, André Nollkaemper, Niels Philipsen, 2019-03-28. Analyzes how combinations of instruments at different levels of government or smart mixes can effectively regulate transboundary environmental harm.

This book focuses on various psycho-social and socio-physical aspects of climate change and includes a wide range of case studies. Included topics are notable climate-related social thinking, climate vulnerability, transformation in socio-ecological subsystems, bioclimatological, urban bioclimatological, and socio-bioclimatic ideas, disasters, policy instruments, climate justice, human rights, and sustainability.
