

Population Growth Patterns

Population Growth

- **Population** = a group of organisms of the same species living in the same place
- **Exponential growth**
 - Population grows without limit
 - Ex. human population
- **Logistic growth**
 - **carrying capacity**: the theoretical maximum population that a given environment can support
 - Population grows quickly at first and then levels off
 - Ex. most natural populations (fish, rabbits, trees, etc.)

Population density measures the number of individual organisms living in a defined space

- Determined by limiting factors such as ...
 - Birth
 - Immigration
 - Death
 - Emigration

Then density dependent/independent factors take effect

Limiting factors

- **Limiting factors** = aspects of the environment that limit the size a population can reach
- limiting factors can be **biotic** or **abiotic**
- limiting factors can also be classified as density-dependent or density-independent
