The CIB International Council for Research and Innovation in Building Construction was established in 1953 as an association whose objectives were to stimulate and facilitate international cooperation and information exchange between governmental research institutes in the building and construction sector with an emphasis on those institutes engaged in technical fields of research. The conference brought together more than 200 scholars from 40 countries who presented the innovative concepts and methods featured in this collection of papers.

Metrics of Sensory Motor Coordination and Integration in Robots and Animals Fabio Bonsignorio, Elena Messina, Angel P. del Pobil, John Hallam, 2019-03-23
This book focuses on a critical issue in the study of physical agents whether natural or artificial: the quantitative modelling of sensory motor coordination. Adopting a novel approach it defines a common scientific framework for

both the intelligent systems designed by engineers and those that have evolved naturally As such it contributes to the widespread adoption of a rigorous quantitative and refutable approach in the scientific study of embodied intelligence and cognition More than 70 years after Norbert Wiener s famous book Cybernetics or Control and Communication in the Animal and the Machine 1948 robotics AI and life sciences seem to be converging towards a common model of what we can call the science of embodied intelligent cognitive agents This book is interesting for an interdisciplinary community of researchers technologists and entrepreneurs working at the frontiers of robotics and AI neuroscience and general life and brain sciences
