Monitoring endogenous GPCRs: lessons for drug design Dominique Massotte, 2015-10-07 G protein coupled receptors GPCRs are integral membrane proteins forming the fourth largest superfamily in the human genome Many of these receptors play key physiological roles and several pathologies have been associated with receptor functional abnormalities

GPCRs therefore represent important goals for drug design in pharmaceutical companies since they constitute the target of about one third of the drugs currently on the market. However, endogenous GPCRs are most often difficult to study because of a lack of tools to target them specifically and single out their response to physiological or drug elicited stimulations. Hence, studies mostly focused on recombinant receptors expressed in a variety of cellular models that do not always closely reflect the receptor natural environment and often deal with levels of expression exceeding by far physiological ranges. Recent technological developments combining for example genetically modified animals and advanced imaging approaches have improved our ability to visualize endogenous GPCRs. To date, trailing receptor activation subsequent intracellular redistribution changes in signaling cascade up to integrated response to a drug elicited stimulation is at hand, though the impact of a physiological challenge on receptor dynamics remains a major issue. Data however suggest that the receptor may embrace a different fate depending on the type of stimulation in particular if sustained or repeated. This suggests that current drugs may only partially mimic the genuine response of the receptor and may explain at least in part their secondary effects. Commonalities and specificities between physiological and drug induced activation can thus represent valuable guidelines for the design of future drugs.

Molecular mechanisms of cellular stress responses in cancer and their therapeutic implications Megan Chircop, Daniel Speidel, 2015-03-06. In response to stress, cells can activate a myriad of signalling pathways to bring about a specific cellular outcome including cell cycle arrest, DNA repair, senescence, and apoptosis. This response is pivotal for tumour suppression as all of these outcomes result in restriction of the growth and/or elimination of damaged and pre-malignant cells. Thus, a large number of anti-cancer agents target specific components of stress response signalling pathways with the aim of causing tumour regression by stimulating cell death. However, the efficacy of these agents is often impaired due to mutations in genes that are involved in these stress responsive signalling pathways, and instead, the oncogenic potential of a cell is increased, leading to the initiation and/or progression of tumorigenesis. Moreover, these genetic defects can increase or contribute to resistance to chemotherapeutic agents and/or radiotherapy. Modulating the outcome of cellular stress responses towards cell death in tumour cells without

affecting surrounding normal cells is thus one of the ultimate aims in the development of new cancer therapeutics To achieve this aim a detailed understanding of cellular stress response pathways and their aberrations in cancer is required This Research topic aims to reflect the broadness and complexity of this important area of cancer research **Intelligent Electronic Devices** Teen-Hang Meen,Wenbing Zhao,Cheng-Fu Yang,2020-05-20 In a modern technological society electronic engineering and design innovations are both academic and practical engineering fields that involve systematic technological materialization through scientific principles and engineering designs Engineers and designers must work together with a variety of other professionals in their quest to find systems solutions to complex problems Rapid advances in science and technology have broadened the horizons of engineering while simultaneously creating a multitude of challenging problems in every aspect of modern life Current research is interdisciplinary in nature reflecting a combination of concepts and methods that often span several areas of mechanics mathematics electrical engineering control engineering and other scientific disciplines In addition the 2nd IEEE International Conference on Knowledge Innovation and Invention 2019 IEEE ICKII 2019 was held in Seoul South Korea on 12 15 July 2019 This book Intelligent Electronic Devices includes 13 excellent papers form 260 papers presented in this conference about intelligent electronic devices The main goals of this book were to encourage scientists to publish their experimental and theoretical results in as much detail as possible and to provide new scientific knowledge relevant to the topics of electronics Mathematical Optimization Theory and Operations Research: Recent Trends Anton Ereemeev,Michael Khachay,Yury Kochetov,Vladimir Mazalov,Panos Pardalos,2024-12-19 This book constitutes the revised selected papers from the 23rd International Conference on Mathematical Optimization Theory and Operations Research MOTOR 2024 held in Omsk Russia from June 30 to July 06 2024 The 26 full papers included in this book were carefully reviewed and selected from 79 submissions These papers have been organized in the following topical sections Mathematical programming Combinatorial optimization Operations research and Machine learning and optimization
