extension Ingemar Patrick Linden's central claim is that death is evil. In this first comprehensive refutation of the most common arguments in favor of human mortality, he writes passionately in favor of antiaging science and radical life extension. We may be on the cusp of a new human condition where scientists seek to break through the arbitrarily set age limit of human existence to address aging as an illness that can be cured. The book, however, is not about the science and technology of life extension but whether we should want more life. For Linden, the answer is a loud and clear yes. The acceptance of death is deeply embedded in our culture. Linden examines the views of major philosophical voices of the past whom he calls death's ardent advocates. These include the Buddha, Socrates, Plato, Lucretius, and Montaigne. All have taught what he calls the Wise View, namely that we should not fear death. After setting out his case against death, Linden systematically examines each of the accepted arguments for death: that aging and death are natural; that death is harmless; that life is overrated; that living longer would be boring; and that death saves us from overpopulation. He concludes with a dialogue concerning the badness of human mortality. Though Linden acknowledges that *The Case Against Death* is a negative polemic, he also defends it as optimistic in that the badness of death is a function of the goodness of life. Complexity theories gained prominence in the 1990s with a focus on self-organizing and complex adaptive systems. Since then, complexity theory has become one of the fastest growing topics in both the natural and social sciences and is touted as a revolutionary way of understanding the behavior of complex systems. This book uses complexity theory to surface and challenge the deeply held cultural assumptions that shape how we think about reality and knowledge. In doing so, it shows how our traditional approaches to generating and applying knowledge may be

paradoxically exacerbating some of the wicked environmental problems we are currently facing The author proposes an innovative and compelling argument for rejecting old constructs of knowledge transfer adaptive management and adaptive capacity The book also presents a distinctively coherent and comprehensive synthesis of cognition learning knowledge and organizing from a complexity perspective It concludes with a reconceptualization of the problem of knowledge transfer from a complexity perspective proposing the concept of creative capacity as an alternative to adaptive capacity as a measure of resilience in socio ecological systems Although written from an environmental management perspective it is relevant to the broader natural sciences and to a range of other disciplines including knowledge management organizational learning organizational management and the philosophy of science
