L. Anderson, 2021-04-01 How can markets help us adapt to the challenges of climate change Editor Terry L Anderson brings together this collection of essays featuring the work of nine leading policy analysts who argue that market forces are just as important as government regulation in shaping climate policy and should be at the heart of our response to helping societies adapt to climate change Anderson notes in his introduction that most current climate policies such as the Paris Agreement require hard to enforce collective action and focus on reducing or mitigating greenhouse gases rather than adapting to their negative effects Adaptive actions can typically deliver much more faster and more cheaply than any realistic climate policy The authors tackle a range of issues the hidden costs of renewable energy sources the political obstacles surrounding climate change policy insurance and financial instruments for pricing risk of exposure to the effects of climate change and more Reliance on emerging renewable energies and a carbon tax are not enough to prevent the effects of global warming they argue We must encourage more private action and market incentives to adapt to a rapidly changing climate *Advances in*

Life by Algorithms Catherine Besteman, Hugh Gusterson, 2019-05-23. Essays on the downsides, dysfunctions, and dangers of automated decision making. An excellent survey of the algorithmically managed life: Choice, The phone systems that businesses use to screen calls, The link between student standardized test scores and public schools' access to resources, The algorithms that regulate patient diagnoses and reimbursements to doctors, The impenetrable corporate bureaucracy that can drive customers in need of help up the wall or drive them to suicide, The storage, sorting, and analysis of massive amounts of information have enabled the automation of decision making at an unprecedented level. Meanwhile, computers have offered a model of cognition that increasingly shapes our approach to the world. The proliferation of robo-processes is the result, as editors Catherine Besteman and Hugh Gusterson observe in this rich and wide-ranging volume, which features contributions from a distinguished cast of scholars in anthropology, communications, international studies, and political science. Though automatic processes are designed to be engines of rational systems, the stories in *Life by Algorithms* reveal how they can in fact produce absurd, inflexible, or even dangerous outcomes. Joining the call for algorithmic transparency, the contributors bring exceptional sensitivity to everyday sociality into their critique to better understand how the perils of modern technology affect finance, medicine, education, housing, the workplace, food production, public space, and emotions, not as separate problems but as linked manifestations of a deeper defect in the fundamental ordering of our society. *The Machine Stops*, E. M. Forster's 1909 science fiction story, tells the tale of a human society collapsing when the technology upon which it has become dependent fails. Think of this volume as *The Machine Starts*, a collection of unsettling ethnographic accounts of the rise of algorithmic governance. A necessary and sobering call to arms. Stefan Helmreich, Massachusetts Institute of Technology. Contributors include Catherine Besteman, Alex Blanchette, Robert W. Gehl, Hugh Gusterson, Catherine Lutz, Ann Lutz-Fernandez, Joseph Masco, Sally Engle Merry, Keesha M. Middlemass, Noelle Stout, Susan J. Terrio.
