

PHYSICS 1

STUDY GUIDE: ORBITAL MOTION

STUDY GUIDE

ORBITAL MOTION

Orbital Motion

- Orbital motion is when an object follows a circular or elliptical path (an "orbit") around another object, where the only force acting on the object is gravity.
- Technically the two objects are both in orbit around a common point called a "barycenter" but we'll focus on a simplified version for now, where one of the objects has much more mass than the other and the barycenter is approximately at the center of the larger object.

Satellites and the International Space Station are in orbit around the earth about 200-2000 km above the surface

The moon is in orbit around the earth at a distance of about 384,400 km

The earth is in orbit around the sun at a distance of about 149,000,000 km

Physical Science Motion Study Guide

S Baum

Physical Science Motion Study Guide:

Right here, we have countless book **Physical Science Motion Study Guide** and collections to check out. We additionally meet the expense of variant types and with type of the books to browse. The normal book, fiction, history, novel, scientific research, as skillfully as various supplementary sorts of books are readily straightforward here.

As this Physical Science Motion Study Guide, it ends occurring inborn one of the favored books Physical Science Motion Study Guide collections that we have. This is why you remain in the best website to look the unbelievable books to have.
