Patrick McCray, 2016-05-31 Did the Woodstock generation reject science or re create it An enthralling study of a unique period in scientific history New Scientist Our general image of the youth of the late 1960s and early 1970s is one of hostility to things like missiles and mainframes and plastics and an enthusiasm for alternative spirituality and getting back to nature But this enlightening collection reveals that

the stereotype is overly simplistic In fact there were diverse ways in which the era s countercultures expressed enthusiasm for and involved themselves in science of a certain type Boomers and hippies sought a science that was both small scale and big picture as exemplified by the annual workshops on quantum physics at the Esalen Institute in Big Sur or Timothy Leary s championing of space exploration as the ultimate high Groovy Science explores the experimentation and eclecticism that marked countercultural science and technology during one of the most colorful periods of American history Demonstrate s that people and groups strongly ensconced in the counterculture also embraced science albeit in untraditional and creative ways Science Each essay is a case history on how the hippies repurposed science and made it cool For the academic historian Groovy Science establishes the deep mark on American culture made by the countercultural innovators For the non historian the book reads as if it were infected by the hippies democratic intent no jargon few convoluted sentences clear arguments and a sense of delight Nature In the late 1960s and 1970s the mind expanding modus operandi of the counterculture spread into the realm of science and sh t got wonderfully weird Neurophysiologist John Lilly tried to talk with dolphins Physicist Peter Phillips launched a parapsychology lab at Washington University Princeton physicist Gerard O Neill became an evangelist for space colonies Groovy Science is a new book of essays about this heady time Boing Boing **Physics From The Edge: A New Cosmological Model For Inertia** Michael Edward McCulloch, 2014-07-11 The fundamental and very important property of inertia has never been well understood This book shows how inertia has puzzled many scientists such as Galileo and Mach and then presents a new theory that explains inertia for the first time and also predicts galaxy rotation without dark matter cosmic acceleration and some other anomalies Further evidence for and tests of the theory are presented and exciting applications such as new inertial launch methods and the theoretical possibility of faster than light travel will be discussed To allow readers to use the theory themselves some simple maths is included and to help explain the points made there are numerous cartoons by the author **ICEL2015-10th International Conference on e-Learning** Dr Carlton Watson, 2015-06-12 These proceedings represent the work of researchers participating in the 10th International Conference on e Learning ICEL 2015 which is being hosted this year by the College of the Bahamas Nassau on the 25 26 June 2015 ICEL is a recognised event on the International research conferences calendar and provides a valuable platform for individuals to present their research findings display their work in progress and discuss conceptual advances in the area of e Learning It provides an important opportunity for researchers and managers to come together with peers to share their experiences of using the varied and expanding range of e Learning available to them With an initial submission of 91 abstracts after the double blind peer review process there are 41 academic Research papers and 2 PhD papers Research papers published in these Conference Proceedings These papers come from some many different countries including Australia Belgium Brazil Canada China Germany Greece Hong Kong Malaysia Portugal Republic of Macedonia Romania Slovakia South Africa Sweden United Arab Emirates UK and the USA A selection of the best papers those agreed by a panel

Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code

Small,2013-06-17 We are in the midst of a digital revolution until recently the majority of appliances used in everyday life have been developed with analogue technology Now either at home or out and about we are surrounded by digital technology such as digital film audio systems computers and telephones From the late 1940s until the 1970s analogue technology was a genuine alternative to digital and the two competing technologies ran parallel with each other During this period a community of engineers scientists academics and businessmen continued to develop and promote the analogue computer At the height of the Cold War this community and its technology met with considerable success in meeting the urgent demand for high speed computing for use in the design and simulation of rockets aircraft and manned space vehicles The Analogue Alternative tracks the development commercialisation and ultimate decline of the electronic analogue computer in the USA and Britain It examines the roles played by technical economic and cultural factors in the competition between the alternative technologies but more importantly James Small demonstrates that non technical factors such as the role of military enterprise and the working practices of analogue engineers have been the most crucial in analogue s demise l This book will be of interest to students of the history and sociology of science and technology particularly computing It will also be relevant to those interested in technical change and innovation and the study of scientific cultures **Zirconia** Sam Stuart,2013-10-22 Zirconia 3rd Edition Volume 1 provides a comprehensive coverage of the various areas of concerns in the zirconia industry The title first covers the various forms of zirconia and then proceeds to tackling the sources of zirconia Next the selection deals with methods of production The subsequent chapter covers the production trade and consumption of zirconia The text also talks about end uses of zirconia along with its price The book will be of great interest to professionals who are involved in the zirconia industry **Military Review** ,2015 Federal Register ,2013-12 *But Will It Fly?* Iver P. Cooper,2025-09-17 Conventional aircraft today are propelled by the action of propellers or jets and powered by the internal combustion of petroleum fuels in piston turboprop or jet engines But other power sources powerplants and propulsion devices for airships as well as aircraft have been proposed and even experimented with over the last few centuries The power sources considered include human muscles steam batteries nuclear reactors and hydrogen fuel and the propulsion devices

include sails oars flapping wings rockets and cycloidal propellers This meticulously researched book presents the history of these unconventional aerial power and propulsion systems explains the underlying science and technology behind them and assesses the crucial question of practicality *Big Science, Innovation, and Societal Contributions* Shantha

Fang,2013-06-29 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction
