

# Moon Note-Taking Guide

**Why do we see the same face of the moon?**

Although the moon rotates around its own axis, it rotates at the same rate that it orbits Earth, so that the same side of the moon is always facing Earth. This is called synchronous rotation. The moon's rotation period is 27.3 days, and its orbital period is also 27.3 days. This is a result of the fact that the moon was formed from the same material that formed Earth, and it has been tidally locked to Earth since its formation.
