Polo 2013 Manual:

Manual of Deixis in Romance Languages Konstanze Jungbluth, Federica Da Milano, 2015-10-16 Deixis as a field of research has generated increased interest in recent years. It is crucial for a number of different subdisciplines: pragmatics, semantics, cognitive and contrastive linguistics, to name just a few. The subject is of particular interest to experts and students, philosophers, teachers, philologists and psychologists interested in the study of their language or in comparing linguistic structures. The different deictic structures not only the items themselves but also the oppositions between them reflect the fact that neither the notions of space, time, person nor our use of them are identical cross-culturally. This diversity is not restricted to the difference between languages but also appears among related dialects and language varieties. This volume will provide an overview of the field focusing on Romance languages but also reaching beyond this perspective. Chapters on diachronic developments, language change, comparisons with other non-European languages and on interfaces with neighboring fields of interest are also included. The editors and authors hope that readers regardless of their familiarity with Romance languages will gain new insights into deixis in general and into the similarities and differences among deictic structures used in the languages of the world. *The Student's Manual* Chandler B. Beach, 1909 **The Oxford Handbook of Suicide and Self-Injury** Matthew K. Nock, 2014-05-08 Suicide is a perplexing human behavior that remains among the leading causes of death worldwide, responsible for more deaths each year than all wars, genocide and homicide combined. Although suicide and other forms of self-injury have baffled scholars and clinicians for thousands of years, the past few decades have brought significant leaps in our understanding of these behaviors. This volume provides a comprehensive summary of the most important and exciting advances in our understanding of suicide and self-injury and our ability to predict and prevent it. Comprised of a formidable who's who in the field, the handbook covers the full spectrum of topics in suicide and self-injury across the lifespan, including the classification of different self-injurious behaviors, epidemiology, assessment techniques and intervention. Chapters probe relevant issues in our society surrounding suicide, including assisted suicide and euthanasia, suicide terrorism, overlap between suicidal behavior and interpersonal violence, ethical considerations for suicide researchers and current knowledge on survivors of suicide. The most comprehensive handbook on suicide and self-injury to date, this volume is a must-read text for graduate students, fellows, academic and research psychologists and other researchers working in the brain and behavioral sciences.
