James Press,Judith M. Tanur,2012-01-20 Comparing and contrasting the reality of subjectivity in the work of history's great scientists and the modern Bayesian approach to statistical analysis Scientists and researchers are taught to analyze their data from an objective point of view allowing the data to speak for themselves rather than assigning them meaning based on expectations or opinions But scientists have never behaved fully objectively Throughout history some of our greatest scientific minds have relied on intuition hunches and personal beliefs to make sense of empirical data and these subjective influences have often aided in humanity's greatest scientific achievements The authors argue that subjectivity has not only played a significant role in the advancement of science but that science will advance more rapidly if the modern methods of Bayesian statistical analysis replace some of the classical twentieth century methods that have traditionally been taught To accomplish this goal the authors examine the lives and work of history's great scientists and show that even the most successful have sometimes misrepresented findings or been influenced by their own preconceived notions of religion metaphysics and the occult or the personal beliefs of their mentors Contrary to popular belief our greatest scientific thinkers approached their data with a combination of subjectivity and empiricism and thus informally achieved what is more formally accomplished by the modern Bayesian approach to data analysis Yet we are still taught that science is purely objective This innovative book dispels that myth using historical accounts and biographical sketches of more than a dozen great scientists including Aristotle Galileo Galilei Johannes Kepler William Harvey Sir Isaac Newton Antoine Levoisier Alexander von Humboldt Michael Faraday Charles Darwin Louis Pasteur Gregor Mendel Sigmund Freud Marie Curie Robert Millikan Albert Einstein Sir Cyril Burt and

Margaret Mead Also included is a detailed treatment of the modern Bayesian approach to data analysis Up to date references to the Bayesian theoretical and applied literature as well as reference lists of the primary sources of the principal works of all the scientists discussed round out this comprehensive treatment of the subject Readers will benefit from this cogent and enlightening view of the history of subjectivity in science and the authors alternative vision of how the Bayesian approach should be used to further the cause of science and learning well into the twenty first century English Language Teaching Research in the Middle East and North Africa Sahbi Hidri, 2018-11-23 This edited collection examines a range of English Language Teaching ELT research in the Middle East and North Africa MENA While the MENA context has witnessed considerable change in recent years it has so far been under represented in ELT research at both the regional and the international level This book aims to fill that gap by surveying the current state of the field examining in detail a range of issues and concepts and suggesting future directions for further research It will be of interest to ELT researchers and practitioners in general not just those based in MENA contexts themselves *The God Problem* Howard Bloom, 2012-08-30 God's war crimes Aristotle's sneaky tricks Einstein's pajamas information theory's blind spot Stephen Wolfram's new kind of science and six monkeys at six typewriters getting it wrong What do these have to do with the birth of a universe and with your need for meaning Everything as you're about to see How does the cosmos do something it has long been thought only gods could achieve How does an inanimate universe generate stunning new forms and unbelievable new powers without a creator How does the cosmos create That's the central question of this book which finds clues in strange places Why A does not equal A Why one plus one does not equal two How the Greeks used kickballs to reinvent the universe And the reason that Polish born Beno t Mandelbrot the father of fractal geometry rebelled against his uncle You'll take a scientific expedition into the secret heart of a cosmos you've never seen Not just any cosmos An electrifyingly inventive cosmos An obsessive compulsive cosmos A driven ambitious cosmos A cosmos of colossal shocks A cosmos of screaming stunning surprise A cosmos that breaks five of science's most sacred laws Yes five And you'll be rewarded with author Howard Bloom's provocative new theory of the beginning middle and end of the universe the Bloom toroidal model also known as the big bagel theory which explains two of the biggest mysteries in physics dark energy and why if antimatter and matter are created in equal amounts there is so little antimatter in this universe Called truly awesome by Nobel Prize winner Dudley Herschbach *The God Problem* will pull you in with the irresistible attraction of a black hole and spit you out again enlightened with the force of a big bang Be prepared to have your mind blown From the Hardcover edition **International Conference on Social, Education and Management Engineering** , 2014-07-09 SEME2014 is a convention which aims at calling for people's attention to the improvements of education environments and providing excellent researchers from the world an opportunity to present their creative and inspiring ideas The wide range of topics for SEME2014 includes social research like social network analysis social system dynamics and area studies education science and technology like higher education
