People who belong to the category of the mentally ill face several challenges. One of these challenges is the stigma they have to face. Stigmatization refers to social rejection. Individuals who are often stigmatized are ignored and rejected by other people because of the certain 'label' that they carry. It may also be that their behaviors indicate clearly that they belong to a specifically labeled group. Most particularly, stigmatization of those who are mentally ill is often caused by the belief of the public in different myths, such as those involving the dangers of those who are mentally ill. Uncovering those myths is effective in reducing stigmatization.

Regarding those who are mentally ill, it usually appears that most people react to the mentally ill with rejection and fear. Matthews, Peterson, & Tach (2002) examined the impact of descriptions on the behavior and causal attributions of the target about the actual source of the behavior, the perceived dangerousness, labeling, as well as the sociodemographic characteristics of the participants. About 20 percent of the participants have labeled a specific target which is described with symptoms of depression as having a form of mental illness. As a result, a common responses to the mentally ill are fear and rejection of violence.

On the other hand, research shows that a common response to a person who is mentally ill is fearing violence, with individuals who are diagnosed with mental patients committing violence at a similar rate as those who have not been diagnosed (Matthews, 2002). The perceptions of the public may not necessarily match what is reality because of the lack of contact of the public with the person who has a mental illness.

Alfarez and Lingh (2005) examined the contact with a mentally ill individual along with the stigma revolving mental illness, social distance and perceptions of dangerousness through a telephone survey. They have discovered that, as the own life contact of a participant with mental illness increased, the participants involved were less likely to have

Comprehensive Sampling and Sample Preparation Josep M. Bayona, Paola Dugo, X. Chris Le, Hian Kee Lee, Xing-Fang Li, Heather Lord, 2012-12-31 Comprehensive Sampling and Sample Preparation is a complete treatment of the theory and methodology of sampling in all physical phases and the theory of sample preparation for all major extraction techniques It is the perfect starting point for researchers and students to design and implement their experiments and support those experiments with quality reviewed background information In its four volumes fundamentals of sampling and sample preparation are reinforced through broad and detailed sections dealing with Biological and Medical Environmental and Forensic and Food and Beverage applications The contributions are organized to reflect the way in which analytical chemists approach a problem It is intended for a broad audience of analytical chemists both educators and practitioners of the art and can assist in the preparation of courses as well in the selection of sampling and sample preparation techniques to address the challenges at hand Above all it is designed to be helpful in learning more about these topics as well as to encourage an interest in sampling and sample preparation by outlining the present practice of the technology and by indicating research opportunities Sampling and Sample preparation is a large and well defined field in Analytical Chemistry relevant for many application areas such as medicine environmental science biochemistry pharmacology geology and food science This work covers all these aspects and will be extremely useful to researchers and students who can use it as a starting point to design and implement their experiments and for quality reviewed background information There are limited resources that Educators can use to effectively teach the fundamental aspects of modern sample preparation technology Comprehensive Sampling and Sample Preparation addresses this need but focuses on the common principles of new developments in extraction technologies rather than the differences between techniques thus facilitating a more thorough understanding Provides a complete overview of the field Not only will help to save time it will also help to make correct assessments and avoid costly mistakes in sampling in the process Sample and sample preparation are integral parts of the analytical process but are often less considered and sometimes even completely disregarded in the available literature To fill this gap leading scientists have contributed 130 chapters organized in 4 volumes covering all modern aspects of sampling and liquid solid phase and membrane extractions as well as the challenges associated with different types of matrices in relevant application areas
