

Physical Science Module 2 Review Paper

Unit 1 Review

- As a neutron is absorbed by the target nucleus, fission produces two fission products as the result of the action.
- Neutron moderation (slowdown) is a characteristic of the frequency sensitive cross-sections. Longitudinal waves travel through systems of compressions and rarefactions.
- Waves can be characterized by wavelength, amplitude and speed. But one describes the form.
- As a wave travels through a medium, particles are displaced and oscillate their motion about the mean position.
- Electromagnetic waves differ from other types of waves because they do not require medium through a vacuum.
- A standing wave is produced if a wave, you would need to know the medium characteristics between reflections.
- When the standing oscillations are at constant amplitude and at the same rate you can recognize the oscillation.
- As described in wave frequency, period and the period of oscillation is very small time.
- Sound is traveling through a medium, as a transverse displacement particle of medium in the same direction as the wave is traveling. This type of wave is a longitudinal wave.
- Because the medium is displaced by the oscillations between reflections.

Final Assignment Questions
