A Flushing System for Combined Sewer Cleansing Darrell W. Monroe, John P. Pelmulder, FMC Corporation. Central Engineering Laboratories, 1972 Full scale tests were conducted on two variable slope test sewers 12 and 18 inch diameters During the tests solids were first allowed to build up in both test sewers by passing domestic sewage through the sewers for durations of 12 to 40 hours and then were removed by hydraulic flushing Formulas were developed which gave satisfactory predictions of several cleansing efficiencies and wave depths for the flush waves and sewer sizes studied A prototype flush station developed can be inserted in a manhole to provide the functions necessary to pick up sewage from the sewer store it in a coated fabric tank and release the stored sewage as a flush wave upon receipt of an external signal An estimate of costs of periodically flushing combined sewer laterals are given *Federal Register* ,2013-02 **2006 Operational Law Handbook** , The Encyclopedia of Operations Management Arthur V. Strategies for Brigade Combat Teams Using Future Combat Systems (FCS) Technologies Michael G. Shanley, 2007 This study seeks to help the Army identify options to improve its future i e circa 2016 training strategies for Brigade Combat Teams BCTs equipped with Future Combat System FCS technologies Key findings are that live training will need to remain at the core of training programs for FCS units and that adaptation to changing operational requirements will be a primary training challenge Overall the findings indicate that planned training enhancements can provide important improvements across a wide spectrum however the overall training capability achieved will likely be less than that needed to meet future training requirements Unit time the potential for technological advancement and training budgets were found to be key constraints While the study stresses greater emphasis on training manpower support in battle command training as the Army s best chance for significant near term improvement it concludes that longer term improvement will depend on how closely the Army monitors and manages its enhancement programs The process of shaping and balancing future training enhancements for example would benefit from better information and improved evaluative capabilities These changes would be further enhanced by developing better metrics for the quality quantity and adaptability of training by continuing to improve spiral development processes to evolve training methods and means and by improving the visibility of financial information across training categories **Complete Guide to the CITP Body of Knowledge** Tommie W.
