Any good attacker will tell you that expensive security monitoring and prevention tools aren't enough to keep you secure. This practical book demonstrates a data-centric approach to distilling complex security monitoring, incident response, and threat analysis ideas into their most basic elements. You'll learn how to develop your own threat intelligence and incident detection strategy rather than depend on security tools alone. Written by members of Cisco's Computer Security Incident Response Team, this book shows IT and information security professionals how to create an InfoSec playbook by developing strategy, technique, and architecture. Learn incident response fundamentals and the importance of getting back to basics. Understand threats you face and what you should be protecting. Collect, mine, organize, and analyze as many relevant data sources as possible. Build your own playbook of repeatable methods for security monitoring and response. Learn how to put your plan into action and keep it running smoothly. Select the right monitoring and detection tools for your environment. Develop queries to help you sort through data and create valuable reports. Know what actions to take during the incident response phase.

Innovation in an Advanced Consumer Society Peder Inge Furseth, Richard Cuthbertson, 2016. This book aims to develop innovation theory by focusing on innovation in a consumer society. In an advanced consumer society, services dominate and are provided through digital as well as physical channels by local, national, and global firms. This book aims to identify the ways in which value can be increased for all stakeholders through both incremental and disruptive innovation. When interacting with leading businesses, there is a common acceptance that we need a better understanding of how to innovate in a service economy. Today, most advanced economies are service and knowledge-based, accounting for about 70 percent of GDP. OECD reports document a considerable knowledge gap related to service innovation. It is a challenge for both business and society that future economic growth will increasingly be based on services rather than manufacturing and products. Failing to understand innovation issues in this context as an engine for growth is somewhat alarming. This raises the question: do we know how to innovate successfully in a consumer-driven society? In this book, the authors develop the concept of Value-Driven Service Innovation alongside a methodology for applying this approach in practice: the Service Innovation Triangle. They develop a better understanding of innovation based on the uniqueness of services in order to develop the theory of service innovation suitable for a consumer society.
