Middleware 2009 Valérie Issarny, Brian F. Cooper, 2009-11-04 This edition marks the tenth Middleware conference The first conference was held in the Lake District of England in 1998 and its genesis reflected a growing realization that middleware systems were a unique breed of distributed system requiring their own rigorous research and evaluation Distributed systems had been around for decades and the Middleware conference itself resulted from the combination of three previous conferences But the attempt to build common platforms for many different applications required a unique combination of high level abstraction and low level optimization and presented challenges different from building a monolithic distributed system Since that first conference the notion of what constitutes middleware has changed somewhat and the focus of research papers has changed with it The first edition focused heavily on distributed objects as a metaphor for building systems including six papers with CORBA or ORB in the title In following years the conference broadened to cover publish subscribe messaging peer to peer systems distributed databases Web services and automated management among other topics Innovative techniques and architectures surfaced in workshops and expanded to become themes of the main conference while changes in the industry and advances in other research areas helped to shape research agendas This tenth edition includes papers on next generation platforms such as stream systems pervasive systems and cloud systems managing

Situational Awareness for Assistive Technologies Mehul Bhatt, Hans Werner Gsger, 2012 The development of smart assistive technology for personal living and public environments is an opportunity that has been recently recognized by research labs across the world A particular theme that has garnered attention in many countries is the problem of an aging population The combination of a much larger elderly population and the ever increasing cost of providing full time human care for them means that finding practical assisted living solutions for this group is becoming increasingly important Computing is the obvious choice to provide an answer to this growing problem but to have a real impact computer based assistive technologies will need to possess the ability to interact with and interpret the actions and situations of those they are designed to assist The papers in this book explore the diversity of the field of ambient intelligence as well as the wide range of approaches and variety of applications that may prove to be possible Consideration is given to how space action time and other contexts can be represented and reasoned about for use in sensory mapping multi agent interactions assisted living and even emergency responses Many

techniques are examined variety represents one of the most important strengths of this area meaning that the weakness of one approach can be offset by the capability of others The book consists of research contributions dealing with the crucial notion of situational awareness within assistive smart systems emerging as an overarching concept An applied computer science character has been retained whilst bringing to the fore research projects where formal knowledge representation and reasoning techniques have been demonstrated to be applicable to areas within the broader field of ambient intelligence and smart environments
